

Ideal customer profile (ICP)

Purpose: Fit filter and segment playbook for sales and pilot qualification — not a public marketing persona deck.

Product boundaries remain in [MVP_SCOPE.md](#) and [NON_GOALS.md](#). Use this with [SALES_SCOPE_MATRIX.md](#) and [PILOT_GOVERNANCE.md](#). Pricing figures below are **sales guidance for ICP sizing**; confirm current commercial terms before quoting.

Segments:

Segment	Product focus	Typical ACV sweet spot
Core	911 / PSAP / ECC	\$33.6K–\$216K/yr (+ add-ons)
Campus	University & campus safety	\$25K–\$70K/yr
Venue	Stadiums & event centers	\$28K–\$72K/yr

Quick scorecard (all segments)

Strong fit

- Bounded customer (single ECC/PSAP, campus, or venue) willing to run a **controlled** pilot with written assistive-AI governance ([PILOT_GOVERNANCE.md](#)).
- IT / security can support Cognito-based access, URL deployment, and required secrets ([INSTALLATION.md](#)).
- Supervision culture that **reviews** escalations and AI-assisted outputs — not set-and-forget automation.
- **Side-by-side posture:** CAD, radio, ENS, VMS, and logging remain authoritative; Rapid Cortex is an intelligence / reporting layer ([PRODUCT_OVERVIEW.md](#)).

Weak fit (defer or reshape)

- Expectation that Rapid Cortex **replaces** CAD, 911 CPE, radio, ENS, or logging as system of record ([NON_GOALS.md](#)).
 - Requirement for certified CJIS / HIPAA / SOC 2 **claims** in the pilot window without a completed assessment program.
 - Unbounded multi-tenant self-serve signup without agency/institution onboarding.
 - Mandatory bidirectional CAD or guaranteed live radio ingest as a **Day-1** deliverable without a scoped connector project.
 - No executive / operational sponsor, no IT capacity, or budget below segment floors listed below.
-

1. Core — 911 & emergency communications

Tags: CJIS-aware · CAD integration · 40+ languages

Organization profile

Attribute	Profile
Organization types	PSAP · 911 center · ECC · Regional dispatch authority · County / city / municipal dispatch
Dispatcher seat range	1–75 seats (Micro through Command); Enterprise / statewide for 75+
Call volume	2K to 100K+ calls/month depending on jurisdiction size
Geography	US-wide; state capital regions and mid-size counties are highest density targets
Annual budget range	\$33,600–\$600,000/year platform + CAD integration add-ons (\$35K–\$250K) + professional services
Procurement	Government purchasing; competitive RFP often >\$25K; PSAP grants (NextGen 911, E911 surcharge, BRIC); annual budget cycles
Contract length	12–36 months; annual renewal standard; multi-year preferred
ACV sweet spot	\$33.6K–\$216K/year (Essential through Max Pro) + onboarding + add-ons

Decision makers & stakeholders

Role	Type	Notes
Communications Director / PSAP Manager / ECC Director	Champion	Day-to-day pain owner; first evaluator; needs IT and leadership buy-in
Director of IT / CISO	Technical gate	Security, CJIS alignment, CAD/telephony feasibility; can block or accelerate
Sheriff / Chief of Police / Fire Chief / City Manager	Budget authority	Final approver for larger deals; liability, staffing, performance metrics
County Board / City Council	Final approval	Larger contracts; can add 60–120 days; public procurement
Dispatchers / Shift Supervisors	End users	Adoption validators; resistant to added cognitive load — demo live workflow benefits

Pain points & trigger events

- **Dispatcher burnout & staffing crisis** — 25–40% vacancy rates industry-wide; RC reduces per-call mental load via AI structuring.

- **Language barriers** — Interpreter connect times 3–8 minutes; RC real-time translation (40+ languages, <4s latency target).
- **Manual CAD data entry** — Transcribing while managing the call; RC extracts and assists structured population (write-back is gated / not Day-1 default).
- **Supervisor visibility gaps** — Command dashboard, silent monitoring, whisper coaching.
- **QA, compliance & liability** — Searchable transcripts and automated QA scoring vs manual review.
- **Modernization without CAD replacement** — Layer on existing CAD and telephony.

Triggers: Major incident / high-profile failure · New communications director · Grant funding (BRIC, E911, NextGen911) · State modernization mandate · Accreditation review · Staffing crisis.

Technical environment

Area	Typical stack / posture
CAD	Motorola PremierOne · Tyler New World · Hexagon · CentralSquare · Tritech · Mark43 · Zetron
Telephony / PSAP	Motorola ASTRO/APX · Airbus Vesta · Intrado · Comtech · Mission Critical Partners
Logging	NICE Inform · Verint · Motorola Wave · HigherGround · Replay
Existing AI	Often none — greenfield opportunity
RC integration mode	Phase 1 standalone (most pilots) → Phase 2 assisted CAD push → Phase 3 full bidirectional (custom)
Timeline	Standalone in days; CAD read-only 30–90 days; full bidirectional 90–180 days

Buying process

1. **Discovery** — ECC intro → live demo → workflow mapping (30–60 days)
2. **Technical review** — IT/CISO questionnaire → CJIS alignment → CAD feasibility (30–45 days)
3. **Pilot proposal** — 90-day Quick-Start (\$32K–\$210K); no CAD write-back in pilot; Pilot Scope Agreement (15–30 days)
4. **Budget & procurement** — City/county approval, RFP if required, MSA; NET 30 (30–120 days)
5. **Production** — Full MSA → implementation → go-live → support tier

Sales notes

- Cycle: 3–18 months depending on size and procurement.
- Fastest path: ECC Director with budget authority at small–mid agency (\$33.6K–\$72K tier).
- Accelerant: Active grant funding before fiscal year end.
- Blocker: IT security review without a pre-delivered CJIS alignment / security packet.

Pricing fit (guidance)

Tier	Size	Price band	Fit
Micro / Essential	1–3 seats · <2K calls/mo	\$2,800/mo · \$33,600/yr	Small municipal / rural county
Small / Pro	4–10 seats · <10K calls/mo	\$4,200–\$8,500/mo · up to \$102K/yr	Mid-size city or county PSAP
Medium / Pro	11–18 seats · 10K–18K calls/mo	\$13,000/mo · \$156K/yr	Regional / larger county
Command	19–75 seats · up to 100K calls/mo	\$15.5K–\$50K/mo · up to \$600K/yr	Metro ECC, regional PSAP, state capital
Enterprise / Statewide	75+ seats	\$60K–\$250K+/mo · \$720K–\$3M+/yr	Multi-agency / statewide

Add-ons: CAD read-only \$35K–\$100K one-time · CAD write-back \$75K–\$250K · Onsite \$15K–\$100K · Priority support \$2.5K–\$7.5K/mo.

Negative ICP (Core)

- CAD write-back required as non-negotiable Day-1
- No IT capacity for integration setup
- Annual technology budget under \$25K
- Competing AI platform procurement in final stages
- Unwilling to run standalone pilot before full CAD integration
- On-premises only (no cloud)
- No executive sponsor with operational authority

Entry motion & pilot path (Core)

Lead with Quick-Start Pilot (no CAD required). Target ECC Directors at mid-size PSAPs (4–10 seats) with active PSAP grant funds. 90-day scope: real-time transcription, AI incident structuring, live translation on 2–3 channels, supervisor dashboard. **Pilot Scope Agreement first; MSA after pilot success.**

2. Campus — university & campus safety

Tags: ~\$1.40/student · Clery Act · QR · NFC · SMS

Organization profile

Attribute	Profile
Organization types	4-year universities · Community colleges · Private colleges · Large K-12 (5,000+ students) · Hospital / medical campuses with dedicated security
Size basis	\$1.40/enrolled student/year · \$5,000 minimum · Sweet spot 10,000–50,000 enrolled (\$14K–\$70K/yr ACV)
Geography	US-wide; large state universities (SEC, ACC, Big Ten, Pac-12) highest value; regional 10K–30K enrollment highest volume
Annual budget	\$15,000–\$100,000/year platform + onboarding + training
Procurement	University purchasing; often single-approver sub-\$50K; Clery / Title IX / campus safety mandates create urgency
Contract length	12-month academic year aligned; multi-year preferred; auto-renew common
ACV sweet spot	\$25,000–\$70,000/year for 18K–50K student institutions

Decision makers & stakeholders

Role	Type	Notes
Chief of Campus Police / Director of Public Safety	Champion	Owens ops problem; Clery and reporting gaps; fastest demo path
VP Student Affairs / Dean of Students	Budget authority	Safety / student experience budgets; often signer sub-\$50K
CISO / Director of IT	Technical gate	SMS, FERPA, privacy; no PII in logs, anonymous reporting
Provost / President	Institutional sign-off	Larger or politically sensitive purchases
Students / Campus safety staff	End users	Students report (no app); staff operate console

Pain points & trigger events

- Students won't call 911 for many campus incidents → anonymous QR/SMS/NFC (no app).
- Location accuracy broken on vague texts → consent GPS link or manual entry.
- Fragmented radio / phone / walk-up intake → single live console with zones.
- Clery ASR burden → structured, exportable incident records.
- Passive tip lines / download-required apps → live two-way text with security.
- Board / accreditation modernization pressure and peer adoption.

Triggers: High-profile campus incident · New Chief · Clery audit finding · Board modernization directive · Drill outcomes · Enrollment-linked grants.

Technical environment

Area	Typical stack / posture
ENS	Rave · Omnilert · Regroup · Everbridge · Blackboard Connect — RC alongside, not instead
VMS	Milestone · Avigilon · Salient · Genetec · ONVIF-compatible
Campus PD CAD	Some run Motorola/Tyler; many rely on city/county 911 — RC layers on campus security ops
RC requirements	Dedicated Twilio number (local) · A2P 10DLC · QR/NFC per building/zone · Campus admin console
Timeline	MSA → Twilio → accounts → QR/NFC → signs → live in 2–4 weeks
Privacy	No PII in CloudWatch · Anonymous reporting option · Ephemeral location · FERPA-aware design

Buying process

1. **Intro & demo** — QR scan → console (15 min closes most pilots) (14–30 days)
2. **Stakeholder review** — VP Student Affairs + IT; FERPA/privacy + CJIS-alignment brief (15–30 days)
3. **Pilot agreement** — One campus, one semester (~90 days); QR/NFC + training (5–15 days to close)
4. **Contract** — MSA; ACV = enrollment × \$1.40 (confirm current min); live 2–4 weeks
5. **Renewal** — Scan/incident/response metrics → expand zones / roles / multi-year

Sales notes

- Cycle: 6 weeks–4 months (fastest of three segments).
- Fastest path: Campus Police Chief with budget authority at 10K–30K enrollment.
- Accelerant: Recent incident, Clery finding, or peer adoption.
- Submit A2P 10DLC early (1–5 business days) so registration does not delay go-live.

Pricing fit (guidance)

Tier	Enrollment	Price band	Fit
Small campus	~3,500–10,000	\$5,000–\$14,000/yr	Community / small private (min applies)
Mid-size	10,000–25,000	\$14,000–\$35,000/yr	Regional state / smaller conference schools
Large	25,000–50,000	\$35,000–\$70,000/yr	Major state / flagship campuses
Flagship / mega	50,000–70,000+	\$70,000–\$100,000+/yr	Top enrollment / multi-campus

Add-ons: Camera integration for supported VMS often in onboarding · Training \$2,500–\$7,500 · A2P ~\$10 · Twilio number ~\$1.15/mo.

Negative ICP (Campus)

- Under ~3,500 enrolled (below ACV floor)
- No IT capacity for Twilio webhooks / DNS
- Recent ENS contract covering similar functionality
- Legal prohibits SMS-based location collection
- No dedicated campus security / public safety department
- Campus PD fully dependent on city/county 911 with no independent security ops

Entry motion & pilot path (Campus)

Lead with 15-minute student QR → live console demo. Target Chief / Director of Public Safety at 10K–50K enrollment. Pilot: 3–5 zones with QR/NFC, SMS intake, console for one semester. Go-live 2–4 weeks from MSA. Post-pilot metrics (scans, incidents, response) drive renewal and expansion.

3. Venue — stadiums & event centers

Tags: Capacity-tiered · Camera auto-launch · QR · NFC · SMS

Organization profile

Attribute	Profile
Organization types	NFL/NBA/MLB/NHL/MLS stadiums · NCAA arenas · Major concert venues · Convention centers · Airports (domestic terminal) · Multi-purpose event centers · Large fairgrounds
Capacity tiers	Tier 1 <10K · Tier 2 10K–25K · Tier 3 25K–50K · Tier 4 50K+ (custom)
Geography	US-wide; Southeast priority (Atlanta, Charlotte, Nashville, Jacksonville, New Orleans); NFL/NBA highest ACV; NCAA Tier 1 highest volume
Annual budget	\$18,000–\$72,000+/year; enterprise/stadium custom
Procurement	Private sector (faster than government); Security / Ops P&L often to sub-\$75K; legal + insurance/risk
Contract length	12-month (calendar or season); multi-year preferred; event-specific pilots possible
ACV sweet spot	\$28,000–\$72,000/year for Tier 2–4

Decision makers & stakeholders

Role	Type	Notes
Director of Security / VP Security Operations	Champion	Event-day volume and radio gaps; section visibility and fan-to-console
VP / Director of Operations	Budget authority	Liability, insurance, guest NPS
GM / CEO / President	Executive sign-off	Brand protection, peer venues, league pressure
Legal / Risk / Insurance	Compliance gate	Fan-report liability, consent, retention
IT / Technology	Technical gate	VMS/KVS/RTSP, SMS, network segmentation

Pain points & trigger events

- Fan reports lost in radio traffic → structured fan-to-console channel.
- No section-level awareness → bowl map + camera auto-launch.
- Guests won't approach security → QR/NFC on seatbacks / concourses.
- Evidence missed before arrival → photo/video in report flow.
- Post-incident documentation gaps → timestamped audit trail.
- Event-day surge → severity-sorted queues vs radio chatter.

Triggers: High-profile stadium incident · New Security Director · Insurance / risk audit · Peer adoption · League safety mandate · Season planning kickoff.

Technical environment

Area	Typical stack / posture
VMS	Genetec (common in major leagues) · Milestone · Avigilon · Salient · ONVIF
Camera path	RTSP → KVS Producer Agent → Kinesis Video Streams → WebRTC in console; no camera replacement
SMS / reporting	Dedicated Twilio + A2P 10DLC · QR/NFC per section, gate, concourse, restroom corridor
Camera count	Often 100–500+; RC auto-selects top cameras for section — no manual pick
Network	Agent: RTSP:554 on LAN; HTTPS/443 + UDP high ports outbound to AWS; ~5 Mbps/upload per concurrent 1080p stream
Timeline	MSA → Twilio → camera registry → KVS agent → QR/NFC → pre-event test → live; typically 3–6 weeks

Buying process

1. **Intro & demo** — QR → console → **camera auto-launch** → two-way chat (14–30 days)
2. **Technical site assessment** — VMS/RTSP, agent path, SMS plan (15–30 days)
3. **Legal & risk** — MSA, privacy/consent, retention (15–30 days)
4. **Pilot** — One season (3–5 events); selected sections + concourses; pre-event test required (5–15 days)
5. **Production** — Annual MSA; full zone coverage; post-season debrief → renewal

Sales notes

- Cycle: 6 weeks–6 months (faster than government Core).
- Fastest path: Security Director at Tier 2–3 (10K–50K) approaching season.
- Demo closer: camera auto-launch on section incident.
- Mandatory day-before pre-event test: text in → incident → location → camera → two-way chat.

Pricing fit (guidance)

Tier	Capacity	Price band	Fit
Tier 1 — Small	<10,000	\$18,000/yr	Minor league, small arenas, amphitheaters
Tier 2 — Mid	10,000–25,000	\$28,000/yr	MLS, mid arenas, convention centers
Tier 3 — Large	25,000–50,000	\$45,000/yr	MLB, major NCAA, large amphitheaters
Tier 4 — Major	50,000+	\$72,000+/yr (custom)	NFL, mega-venues, large airports

Add-ons: Camera onboarding often included · Onsite event support \$10K–\$25K/event · QR/NFC production client-owned (RC provides assets) · Pre-event testing included.

Negative ICP (Venue)

- Under ~1,000 capacity
- No dedicated security ops / supervisor on event day
- Camera system with no RTSP (legacy analog, no IP conversion)
- Network blocks outbound AWS HTTPS/UDP
- Competing in-house fan reporting already live
- Fewer than ~4 events/year
- Decision-maker is a one-off promoter with no ongoing venue relationship

Entry motion & pilot path (Venue)

Lead with camera auto-launch demo. Target Security Director at Tier 2–3 near season. Pilot: 3–5 sections + concourses, SMS, KVS for pilot zones, 3–5 events. Pre-event test 24 hours before first live event. Per-event debriefs (scans, incidents, response) drive full-venue annual renewal.

Roles we optimize for in pilot

Segment	Primary console operators	Primary reporters
Core	Dispatchers, supervisors, agency admins	Callers (voice)
Campus	Campus security / dispatch	Students / community (QR/SMS/NFC)
Venue	Venue security / guest services / ops	Guests / fans (QR/SMS/NFC)

See [USER_GUIDE.md](#), [role-dashboard-spec.md](#), and segment ops guides under `docs/admin-user-management/` .
