

RAPID CORTEX

Document Package

Contract · GTM · Security · Operations

INTERNAL — CONFIDENTIAL

Prepared: July 09, 2026

Apps on Demand LLC d/b/a Rapid Cortex

Table of Contents

1. Contract & Commercial Package Index

What to send and when — pilot, production, RC Lite, trust packet

2. GTM Execution Plan — 90 Days

Phase-by-phase pilot-first go-to-market playbook

3. Document Gaps Tracker

Missing and draft artifacts with owners and priorities

4. Pilot Checklist — Supervisor

Pre-go-live, shift, QA, escalation, and week-one tasks

5. Subprocessor List

Third parties that may process customer data by feature category

6. Security Questionnaire — Response Pack

Draft responses for agency IT, CJIS coordinators, and procurement

7. Documentation Index

Canonical paths for all internal documents

1

Contract & Commercial Package Index

What to send and when

Contract & Commercial Package Index

Audience: Sales, Solutions, Legal Ops, Implementation Leads. **Status:** Internal. **Not legal advice.** Items marked DRAFT require counsel and/or Finance before customer send.

How to Use This Index

Customer Stage	Send First	Add When
Discovery / NDA	NDA (if needed)	Before sharing architecture or live tenant access
Pilot Evaluation	Pilot offer + scope agreement + trust packet	Before floor time on live incidents
Production Subscription	MSA + Order Form (Exhibit A SOW) + Pricing (Exhibit B) + SLA (Exhibit C)	Before production go-live and recurring billing
RC Lite API Only	RC Lite API Agreement + API pricing guide	Before API key issuance
CAD Integration	Per-vendor SOW addendum + CAD Connection Playbook	Only when CAD scope is in contract

Keep **signed** copies outside git (CRM, Adobe Sign ledger, agency secure share). RC Admin → **Agreements** tracks Adobe Sign completions when connected.

1. Pilot Agencies (PSAP / ECC)

Document	Status	Notes
Pilot offer (commercial narrative)	Sales-ready	Marketing copy; not a contract
Agency pilot scope agreement	DRAFT	Remove "Draft"; legal review; assistive-use language
Agency onboarding checklist	Internal	Companion to scope agreement
Data flow overview	Internal	Security / IT reviewers
CJIS / SOC2 alignment statement	Internal	Not certification
DPA	GAP	PLT-003; marketing /legal/dpa is stub
Security review sign-off	GAP	PLT-002 — per agency process
Implementation workbook	Template	Copy per agency
Agency playbook	Template	Fill before go-live

2. Production / Non-Pilot Agencies

Document	Status	Notes
Master Services Agreement	Template	Apps on Demand LLC d/b/a Rapid Cortex — reconcile entity
Platform Services Agreement	v1.0 template	Adobe Sign path; Exhibit A has \$TBD pricing
Exhibit A — Statement of Work	Template	Populate from Sales Scope Matrix
Exhibit B — Pricing	TBD	Finance + RC_Pricing_Master_Guide_v4.xlsx

Document	Status	Notes
Exhibit C — SLA	Template	Do not promise public SLA until executed
Order Form	GAP	Extract or add short order form referencing MSA
Change Order	GAP	Add one-page change order template
Go / No-Go Checklist	Internal	Pre-GA gate

3. RC Lite API (Partners / Developers)

Document	Status
RC Lite API Agreement	v1.0 template
API pricing (internal)	Internal — align with agreement before send

4. Trust & Procurement Packet

Send as a zip or secure link when security/legal asks before signature:

Artifact	Status
Security questionnaire responses	DRAFT — customize per RFP
Subprocessor list	DRAFT — review quarterly
Security model (technical)	Product
Privacy / retention decisions	Product
Tenant isolation model	Product
Audit event matrix	Product
CJIS alignment notes	Alignment only

Not available in repo: SOC 2 Type II report, executed BAA, CJIS SLA rider, pen-test report — request through sales.

6. Entity & Naming Reconciliation (Legal Action Required)

■ Action Required Before First Production Signature

Issue: *Apps on Demand LLC* vs *Rapid Cortex LLC* appear inconsistently across contract templates.

Files: COMPLETE_MSA_MASTER_DOCUMENT.docx & RC_Platform_Services_Agreement.docx

Resolution: Counsel must pick one contracting entity and amend all templates.

2

GTM Execution Plan

90-Day Pilot-First Playbook

GTM Execution Plan — 90 Days (Pilot-First)

Audience: Sales, Solutions, Implementation, Support, Engineering Leads. **Assumption:** First revenue motion is a **controlled agency pilot** on a shared or dedicated stack — not self-serve GA.

Outcomes by Day 90

- One signed pilot (scope agreement + DPA + security review record) or documented counsel waiver
- One agency live on agreed modules with completed training checklists and playbook
- Measurable pilot review using Pilot Success Metrics and Pilot Review Template
- Contract package indexed and sendable per Contract Package Index
- No oversell: registry, routes, and sales language aligned per Promise Control

Phase 0 — Weeks 1–2: Package & Governance

#	Action	Owner	Deliverable	Done When
0.1	Assign owners for PLT-001–004	Exec / legal	Named owners in deploy blockers tracker	Names in tracker
0.2	Finalize pilot scope agreement	Legal	PDF without "Draft"	Counsel sign-off
0.3	Draft DPA from MSA privacy articles	Legal	Executable DPA doc	Ready for Adobe Sign
0.4	Reconcile contracting entity	Legal	Single entity on all templates	One legal name on MSA + Platform Agreement
0.5	Build trust packet	SE + security	Zip: questionnaire responses, subprocessor list, data flow PDF	Sent to first prospect
0.6	ICP qualification	Sales	ICP scorecard per lead	3+ qualified leads or 1 signed LOI

Phase 1 — Weeks 3–4: Discovery & Technical Fit

#	Action	Owner	Deliverable	Done When
1.1	Discovery call	Sales + SE	Completed Implementation Workbook §1	Workbook on file
1.2	Scope alignment	SE	Mark Sales Scope Matrix rows in/out of pilot	Customer acknowledges in writing
1.3	CAD boundary	SE	Read-only vs write-back decision documented	Matches CAD Connection Playbook
1.4	Integration status review	DevOps	GET /api/integration/status clean for sold modules	Zero blockers for sold features
1.5	Environment decision	DevOps	dev/pilot/prod hostname documented in playbook	Playbook §B filled
1.6	Security review kickoff	Agency IT + RC	Questionnaire returned or meeting held	PLT-002 evidence started

Phase 2 — Weeks 5–6: Contract & Tenant Setup

#	Action	Owner	Deliverable	Done When
2.1	Execute pilot agreement + DPA	Legal + agency	Signed PDFs	PLT-001, PLT-003 closed
2.2	Privacy / retention acknowledgment	Agency + RC	Privacy Retention Decisions signed or email	PLT-004 closed
2.3	Provision agency tenant	DevOps	Cognito pool claims, agencyId, stack config	Installation checklist complete
2.4	Admin onboarding	Implementation	Agency admin completes Pilot Agency Admin Checklist	All boxes checked
2.5	Kickoff meeting	Sales + training	Pilot Kickoff Checklist complete	Meeting notes archived
2.6	Fill agency playbook	Implementation	Playbook with URLs, contacts, escalation paths	§A–F complete

Phase 3 — Weeks 7–8: Training & Floor Readiness

#	Action	Owner	Deliverable	Done When
3.1	Dispatcher training	Training lead	Dispatcher training guide + checklist	Sign-in sheet / LMS record
3.2	Supervisor training	Training lead	Supervisor training guide + checklist	Sign-in sheet
3.3	Admin training	Training lead	Admin training guide complete	Admin sign-off
3.4	Pilot validation smoke	DevOps	Pilot Validation Checklist + post-deploy-smoke.sh log	Green smoke
3.5	Known limitations briefing	SE	Known Limitations walkthrough	Acknowledged in playbook
3.6	Go-live decision	Agency exec + RC	Pilot Readiness Checklist signed	Signed go-live

Phase 4 — Weeks 9–12: Live Pilot & Review

#	Action	Owner	Deliverable	Done When
4.1	Week-1 support	Support	Tickets per Support Model; requestId on all	No P1 > SLA without escalation
4.2	Weekly pilot summary	Implementation	Usage + incidents + config changes (no PII in deck)	4 summaries delivered
4.3	Fortnightly review	Sales + agency	Pilot Review Template — 2 reviews minimum	2 reviews minimum
4.4	Metrics capture	SE + agency	Pilot Success Metrics rows filled	Baseline vs week-8 comparison
4.5	Feedback loop	Product	Feedback Loop items triaged	Top 5 issues have owners

#	Action	Owner	Deliverable	Done When
4. 6	Expansion / exit decision	Exec	Written: expand tier, extend pilot, or wind down	Customer + RC sign-off

Weekly Standing Agenda (30 min)

1. Pipeline: qualified leads vs ICP
2. Blockers: PLT / GA IDs open
3. Integration status for active pilots
4. Support P1/P2 from last 7 days
5. Promise control: any new claims in decks or email?

3

Document Gaps Tracker

Missing & Draft Artifacts

Document Gaps Tracker

Purpose: Single checklist of missing or draft-only artifacts. Update status when counsel, Finance, or ops closes an item.

Legal & Contract Gaps

ID	Artifact	Priority	Status	Notes
LEG-001	Pilot scope agreement (final)	P0	DRAFT	PDF still titled "Draft"
LEG-002	DPA (executable)	P0	GAP	Marketing stub only; see PLT-003
LEG-003	BAA template	P1	GAP	Hospital customers
LEG-004	CJIS SLA rider	P1	GAP	Referenced on trust page
LEG-005	Standalone order form	P1	GAP	Terms reference order form
LEG-006	Change order template	P2	GAP	MSA defines term only
LEG-007	Entity naming reconciliation	P0	OPEN	AOD LLC vs Rapid Cortex LLC
LEG-008	MSA Exhibit B pricing (filled)	P0	TBD	RC_Pricing_Master_Guide_v4.xlsx
LEG-009	Per-vendor CAD SOW	P1	GAP	GA-013
LEG-010	Pen-test SOW / report	P2	GAP	Acceptable-use references pen-test SOW
LEG-011	SOC 2 report	P2	N/A	Third-party audit only

Operational & Documentation Gaps

ID	Artifact	Priority	Status	Notes
OPS-001	Security questionnaire pack	P1	DRAFT	SECURITY_QUESTIONNAIRE_RESPONSES.md
OPS-002	Subprocessor list	P1	DRAFT	SUBPROCESSOR_LIST.md
OPS-003	Supervisor pilot checklist	P2	DONE	PILOT_SUPERVISOR_CHECKLIST.md
OPS-004	Contract package index	P2	DONE	CONTRACT_PACKAGE_INDEX.md
OPS-005	GTM 90-day execution plan	P2	DONE	GTM_EXECUTION_PLAN.md
OPS-006	Docs navigation index	P2	DONE	INDEX.md
OPS-007	Hospital onboarding guide	P2	GAP	role-dashboard-spec only
OPS-008	Transit onboarding guide	P3	GAP	Vertical not built
OPS-009	Filled evidence packages (g1–g5)	P1	TEMPLATE ONLY	docs/evidence/templates/
OPS-010	PILOT_READINESS_RUN_RESULTS	P1	EMPTY	Fill per stack promotion
OPS-011	Hosted docs portal	P2	OPTIONAL	NEXT_PUBLIC_DOCUMENTATION_BASE_URL
OPS-012	GTM_PACKAGE relative links	P2	PARTIAL	Many paths wrong; use INDEX.md

Governance blockers: *PLT-001 (SOW), PLT-002 (security review), PLT-003 (DPA), PLT-004 (privacy sign-off)* — see *NEXT_DEPLOY_BLOCKERS.md*

4

Pilot Checklist — Supervisor

Training & Floor Readiness

Pilot Checklist — Supervisor

Use with Training (Supervisor), User Guide, and the agency's completed Agency Playbook. **Supervisors monitor and review; they do not replace dispatch authority or CAD.** AI output is **assistive only** — see Pilot Governance.

Before Go-Live

- Confirm supervisor accounts use role **commsupervisor** with correct custom:agencyId.
- Walk Known Limitations with dispatch leadership — especially transcript simulator vs live audio, CAD read-only boundaries, and multilingual config requirements.
- Agree agency SOP for when dispatchers must **ignore** AI suggestions (document in playbook §D).
- Verify **Admin** → **Integrations** shows no blockers for modules in the pilot SOW.
- Identify who approves **CAD write-back** submissions if that module is in scope (separate legal scope; default **off**).

Every Shift

- Sign in at the **agency URL** from IT (correct jurisdiction slug + tenant).
- Confirm connection strip shows **Live backend** before monitoring real floor work.
- Spot-check active incidents: agency id, incident type, and transcript stream match the call being worked.
- Watch for repeated **analyze** or **multilingual** errors — escalate per Escalation Paths.

QA and Review Queues

- Process Review / QA queues per agency SOP — document outcomes your agency requires.
- For **non-emergency / triage** queue (if enabled): verify human override path; no autonomous routing to CAD.
- Sample sessions weekly: agree / disagree / edit AI urgency or summary — record in pilot retro.
- Ensure supervisors do **not** approve their own CAD write-back submissions (separate JWT sub required).

Supervisor Monitoring (if enabled)

- Use monitoring features only where agency policy and labor agreements allow.
- Confirm SUPERVISOR_WATCHING or equivalent audit indicators are understood by staff.
- Do not use monitoring for purposes outside documented pilot scope.

Escalation to Rapid Cortex

- Approximate **UTC time** and **incident id** (no PII in subject line if policy requires).
- **requestId** from API error JSON when available.
- Whether issue affects **one user**, **one agency**, or **all users**.

Week One (Supervisor Lead)

- Debrief dispatchers after first live day — capture friction in Feedback Loop.
- Confirm Pilot Dispatcher Checklist is in use on the floor.
- Attend or lead first **fortnightly pilot review**.

5

Subprocessor List

Data Processor Registry (Draft)

Subprocessor List

■ **DRAFT** — Review quarterly and before each major architecture change. Not exhaustive of every AWS API call; lists categories of third parties that may process customer data when features are enabled.

Rapid Cortex is primarily deployed on **Amazon Web Services (us-east-1 by default)**. Customer data is scoped by **agencyId** tenant isolation.

1. Infrastructure (Always On for Hosted SaaS)

Subprocessor	Purpose	Data Categories	Region / Notes
Amazon Web Services	Hosting: Lambda, API Gateway, DynamoDB, S3, Cognito, CloudWatch, Secrets Manager, SES, SNS, EventBridge, ECS/Fargate, CloudFront, Route 53, ACM, WAF	Account metadata, incident data, transcripts, audit logs, auth tokens, media objects	Customer stack region; see Security Model

2. AI and Language (When Enabled — Default on Most Stacks)

Subprocessor	Purpose	Data Categories	Region
Amazon Bedrock	Incident analysis, triage, summarization	Transcript excerpts, incident metadata	AWS region of Bedrock endpoint
Amazon Transcribe	Speech-to-text	Audio / stream metadata	AWS
Amazon Translate	Text translation	Transcript text	AWS
Amazon Comprehend	Language detection / NLP tiers	Transcript text	AWS

Optional (only if secret ARNs configured — off in CJIS-sensitive posture):

Subprocessor	Purpose	Data Categories
OpenAI	Alternate analysis provider	Prompts / transcripts per handler config
Anthropic	Alternate analysis provider	Prompts / transcripts per handler config
Microsoft Azure (Speech / Translator)	Alternate STT / translation	Audio / text per env
Google Cloud	Alternate STT / translation	Audio / text per service account

3. Communications and Integrations (Feature-Gated)

Subprocessor	Purpose	Data Categories	When Used
Amazon SES	Transactional email (invites, billing, notifications)	Email addresses, message content	When email features enabled
Amazon SNS	Ops alerts, optional SMS	Phone/email for alerts	Operator-configured
Amazon Pinpoint	SMS / messaging links (caller media intake)	Phone numbers, message metadata	When Pinpoint features enabled
Twilio (or adapter)	Telephony / SMS integrations	Call/SMS metadata	Only if integration deployed

Subprocessor	Purpose	Data Categories	When Used
Ring (partner API)	Camera / doorbell integrations	Device metadata, media	Ring Connect module only
CAD vendor systems	Read or write adapters	Incident/unit data per agency	Agency-controlled endpoints

4. Payments (Billing Module)

Subprocessor	Purpose	Data Categories
Payment processor (per agency contract)	Invoicing / card processing	Billing contact, payment metadata

6. Customer Responsibilities

- Identity provider policies (MFA, account lifecycle)
- CAD, radio, CPE, and logging systems of record
- Workstation and network security
- Personnel screening per CJIS or state policy
- Executed DPAs with any agency-chosen integrators

Contact: Security review requests — use agency contract channel or privacy@rapidcortex.us for privacy-specific questions.

6

Security Questionnaire

Response Pack (Draft)

Security Questionnaire — Response Pack

Audience: Agency IT security, CJIS coordinators, procurement. **Status: DRAFT** — customize per RFP; not a certification. Remove or edit rows that do not apply to the specific deployment profile (pilot vs production, modules sold).

Company & Service

Question	Response
Service description	Cloud SaaS assistive intelligence for emergency communications — transcription, translation, AI summaries, supervisor QA, optional CAD-adjacent workflows. Does NOT replace CAD, 911, or dispatch authority.
Primary hosting	Amazon Web Services (Lambda, API Gateway, DynamoDB, S3, Cognito, etc.) — see Subprocessor List.
CJIS certification claim?	No. We provide alignment documentation; agency maps controls to their CJIS program.
SOC 2 Type II report?	Not in repo. Alignment statement available; formal report via sales when available.

Data Classification & Tenancy

Question	Response
Tenant isolation	Partitioned by agencyId on DynamoDB access and API authorization — Tenant Isolation Model.
URL slug as security boundary?	No. JWT claims (custom:agencyId, custom:role) enforce access.
Cross-tenant access	Only rcsuperadmin platform role; logged and restricted to RC operators.
Sensitive data types	Incident metadata, transcripts, AI output, audit events, optional media — treat as law enforcement / operational sensitive minimum.

Authentication & Access Control

Question	Response
Identity provider	AWS Cognito User Pool; JWT validated server-side (JWKS).
MFA	Cognito MFA-capable; agency policy enables requirement.
RBAC	Role strings in custom:role; enforced via AuthorizationService in API.
Session / tokens	httpOnly cookies when auth proxy enabled; no long-lived API keys in browser for standard users.
Service accounts	Lambda IAM roles per function; Secrets Manager ARNs for provider keys — no keys in git.

Encryption

Question	Response
In transit	TLS 1.2+ for browser, API Gateway, AWS service calls.
At rest	DynamoDB and S3 AWS-managed encryption by default; KMS CMK upgrade path per agency policy.
Key management	AWS KMS / Secrets Manager; operator rotates secrets per runbook.

Logging & Monitoring

Question	Response
Application logging	Structured logs to CloudWatch; policy: no raw transcripts, passwords, or refresh tokens in logs.
Audit trail	Agency-scoped audit events in DynamoDB — Audit Event Matrix.
Infrastructure audit	CloudTrail recommended; template may include trail bucket — verify stack outputs.
Alerting	CloudWatch alarms + SNS ops topic; customer paging is operator responsibility.

AI & Third-Party Processing

Question	Response
Autonomous dispatch?	No. Human-in-the-loop; AI is decision support only — Pilot Governance.
AI providers	Default AWS (Bedrock, Transcribe, Translate, Comprehend); optional external keys only when explicitly configured.
CJIS-sensitive mode	Prefer AWS-only providers; unset external secret ARNs — CJIS Alignment Notes.
Model training on customer data?	No use of agency incident content to train public foundation models per standard enterprise AI terms (confirm in executed DPA).

Vulnerability & Incident Response

Question	Response
Secure SDLC	IaC (SAM), PR review, CI tests; dependency lockfiles.
Penetration testing	Agency may require written pen-test SOW before production; not bundled in repo.
Incident response	INCIDENT_RESPONSE.md; security triage SECURITY_TRIAGE_PROCESS.md.
Breach notification	Per executed DPA and MSA incident articles.

Business Continuity & Backup

Question	Response
DynamoDB backup	PITR available per stage in template; verify enabled for pilot/prod.
Restore testing	GA-005 — restore drill required before production SLA claims.
RTO / RPO	Not guaranteed in pilot unless Exhibit C SLA executed with numbers.

Compliance Mappings (Informal)

Framework	Posture
CJIS Security Policy	Control alignment documented — not FBI approval
HIPAA / BAA	BAA not in repo — hospital vertical requires separate legal package
FedRAMP	Not claimed
SOC 2	Readiness-oriented practices; formal report separate

Attachments Checklist for RFP Response

- Subprocessor List

- Data flow diagram PDF (Internal Product requirements)
- CJIS alignment statement PDF
- Network diagram (agency-specific — fill per deployment)
- Executed DPA (post-signature)
- Insurance certificate (if required — not in repo)
