Intelligence at the Speed of Response

NexCort iQ — Competitive Intelligence & Sales Battlecards

October 2026 | PSAP/911 • CAD/RMS • Campus • K-12 • Venue • Transit

For NexCort iQ, I would organize the competitive analysis around **five questions your sales representatives need to answer**:

• What does the competitor actually offer compared with NexCort iQ?

• Which customers are already using the competitor?

• What AI capabilities and integrations does the competitor support?

• Where can NexCort iQ realistically compete or complement the existing system?

• What should a representative say when a prospect responds, *"We already use that company"*?

The objective is not simply to prove that NexCort iQ has more features. It is to identify **specific customer problems that an existing vendor has not solved**.

An important distinction throughout this report: NexCort iQ's documented product scope includes both existing capabilities and features under development. A feature appearing in the comparison does not automatically mean it is production-ready, independently validated, or available for every deployment.

Codebase alignment, October 28, 2026: callers hear Nexiq. Campus alerts are named Campus Alerts. Corrected labels below match the app.

1. Direct feature-by-feature comparison

NexCort iQ Core versus leading 911 competitors

The most important comparison areas are:

Capability	NexCort iQ target scope	Competitive significance
AI-assisted call handling	Core / Call Assist	Competes with established AI-assisted emergency communications products
Non-emergency call automation	Call Assist	Potential entry point without replacing emergency call handling
Live caller location	Pinpoint iQ	Must be compared with existing location-sharing and mapping products
Consent-based live video	iQ Vision	Requires integration-specific verification
AI translation	Translate	Language coverage, latency, and accuracy are key buying criteria
AI pre-arrival guidance	Pre-Arrival iQ	Requires clinical/protocol review and dispatcher oversight
CAD-to-CAD interoperability	CAD integration platform	Potential differentiator if certified and proven across vendors
Related-call clustering	Surge View	Useful for high-volume events and duplicate incidents

Capability	NexCort iQ target scope	Competitive significance
CAD/RMS	Separate cloud platform under development	Competes with established mission-critical systems
QA and analytics	Core	Must demonstrate measurable workflow improvements
Responder ETA notifications	In Pre-Arrival iQ	Requires dependable CAD/AVL data and agency-approved release rules

The competitive question: Which of these capabilities can NexCort iQ deliver today, and which ones can a prospect test during a pilot?

That distinction should be built into every sales battlecard.

2. PSAP/911 competitive battlecards

A. RapidSOS

Threat level: Critical

RapidSOS is one of NexCort iQ's most important competitors and potential integration partners.

Its published platform information describes a network supporting more than 23,500 agencies internationally, connections with thousands of public safety software systems, and Harmony AI for emergency-response intelligence. These are vendor-reported figures, not independently audited market-share measurements. RapidSOS

Category	RapidSOS	NexCort iQ opportunity
Emergency location	Extensive connected-device ecosystem	Pinpoint iQ as an additional consent-based location workflow
Camera intelligence	Connected cameras, sensors, and emergency data	iQ Vision for specific agency-approved integrations
AI	Harmony AI	Dispatcher-specific workflows and configurable agency controls
CAD integrations	Broad interoperability network	CAD-to-CAD exchange between agencies
Non-emergency calls	Not its primary historical positioning	Call Assist
Campus safety	Enterprise and safety technology partnerships	Direct campus safety applications
Pre-arrival guidance	Requires detailed feature verification	Pre-Arrival iQ, subject to protocol validation

Known market presence: RapidSOS has relationships across emergency communications, consumer technology, connected devices, and enterprise safety. Its published partner ecosystem includes technology and public safety organizations. RapidSOS

Competitive weakness to investigate: A broad emergency data network does not necessarily solve every agency's local workflow, cross-jurisdictional CAD exchange, or non-emergency call-management problem. This is a potential gap to validate, not a proven RapidSOS deficiency.

Suggested sales response:

> “RapidSOS provides valuable emergency intelligence. We're not asking you to abandon that investment. We'd like to demonstrate how NexCort iQ could support additional workflows, including non-emergency call handling, interagency coordination, and configurable incident management. What challenges remain unresolved in your current environment?”

Best sales approach: Complement first; compete selectively.

B. Axon — Including Prepared AI and Carbyne

Threat level: Critical

This is an especially important competitive development.

Prepared now describes itself as the intelligence layer of Axon 911. Carbyne's APEX platform is also presented as Axon 911 Core, the cloud-native call-handling infrastructure.

These should therefore be analyzed as parts of an increasingly integrated competitive ecosystem, rather than treating Prepared, Carbyne, and Axon as three completely independent sales threats. Axon.com

Feature comparison

Feature	Axon / Prepared / Carbyne	NexCort iQ
Real-time AI transcription	Confirmed	RC Translate
AI call summaries	Confirmed	Session transcript
Live translation	Confirmed	Translate
Caller video	Confirmed	iQ Vision
Live caller location	Confirmed	Pinpoint iQ
Non-emergency call automation	Confirmed	Call Assist
AI-assisted QA	Confirmed	QA & Analytics
Radio monitoring	Advertised by Prepared	Roadmap
CAD data integration	Confirmed for certain workflows	Planned multi-vendor connectors
Evidence management	Axon Evidence ecosystem	RMS and external integration strategy
AI pre-arrival instructions	Verify specific capabilities	Pre-Arrival iQ
Cross-vendor CAD-to-CAD exchange	Verify implementation and supported vendors	Hub in code; write-back off

Prepared reports partnerships with more than 1,000 PSAPs protecting more than 90 million people. Its published features include call transcription, translation, live video, non-emergency workflows, radio monitoring, and QA. prepared911.com

Carbyne describes its platform as serving populations exceeding 250 million worldwide, with cloud-based emergency communications, location, video, translation, and call triage. Carbyne

Competitive weaknesses and opportunities

NexCort iQ should investigate whether individual Axon customers experience:

• Integration limitations with non-Axon systems.

• Additional costs for optional modules.

• Difficulty sharing incident information between jurisdictions.

• Gaps between emergency communications and campus, venue, or transit operations.

• Contract restrictions affecting third-party integrations.

These are **discovery questions**, not established weaknesses.

Suggested sales response

> "Axon has built an extensive public safety ecosystem. NexCort iQ takes a vendor-neutral approach to connecting public safety workflows. Our goal is to help agencies improve capabilities without automatically requiring replacement of their existing systems. Would your team be interested in evaluating a specific workflow that crosses your current platforms?"

Best sales opportunity: Agencies that want to preserve existing technology investments while evaluating additional functionality.

C. Aurelian

Threat level: High for Call Assist

Aurelian competes directly with NexCort iQ's non-emergency call automation.

Its AVA product handles routine non-emergency calls, while CORA provides real-time guidance for emergency call-takers.

Aurelian has reported serving nearly five million people, automating an average of 74% of non-emergency calls among its customers, and saving dispatchers approximately three hours daily. These are company-reported results. Y Combinator

Feature	Aurelian	NexCort iQ
AI non-emergency answering	Yes	Call Assist
Routine call classification	Yes	In the product
Call routing	Yes	In the product
Emergency escalation	Yes	Queue, not a 911 line
Real-time dispatcher guidance	CORA	Core / Pre-Arrival iQ
Multilingual support	Yes	Translate
CAD/RMS integration	Requires interface-level verification	Planned
Caller location sharing	Not established as a core differentiator	Pinpoint iQ
Campus / Venue / Transit suite	Not its principal market	Dedicated NexCort verticals

Competitive opportunity: Rather than trying to beat Aurelian solely on AI call-answering performance, NexCort iQ could position Call Assist as part of a broader dispatch and incident-management environment.

Suggested response:

> “Aurelian is doing important work in non-emergency call automation. NexCort iQ is pursuing a broader operational approach, connecting call intake with incident management and other agency workflows. Which systems need to receive the information after a call is completed?”

Best sales approach: Ask about downstream workflow integration, not just call deflection.

---

3. Cloud CAD/RMS competition

Mark43

Threat level: Critical

Mark43 is particularly relevant because it already offers the kind of cloud-native CAD/RMS environment NexCort iQ is building.

Mark43 publicly identifies more than 300 public safety agency customers, including:

- Boston Police
- Seattle Police
- Albuquerque Police
- California Highway Patrol
- San Antonio Police
- Louisville Police
- U.S. Capitol Police

These are publicly identified relationships; they should not be interpreted as proof that every agency currently uses every Mark43 module. Mark43

Direct CAD/RMS comparison

Capability	Mark43	NexCort iQ CAD/RMS
Cloud-native CAD	Established product	Under development
Cloud-native RMS	Established product	Under development
Unit dispatch	Available	Required for launch
Incident management	Available	Required for launch
Records management	Available	Required for launch
Field responder workflows	Available	Planned
Reporting and analytics	Available	Planned
AI assistance	Advertised	Planned
Third-party integrations	Extensive advertised ecosystem	Connector development
Multiagency data sharing	Available capabilities	Planned

Capability	Mark43	NexCort iQ CAD/RMS
Independent production references	Publicly identified agencies	Not established
Mission-critical operational history	Established	Not yet established

Where NexCort iQ could compete

Mark43's established deployments create a significant barrier to entry.

However, NexCort iQ could pursue smaller initial deployments where an agency wants:

• A supplemental incident-management system.

• A campus-focused dispatch environment.

• A limited operational pilot.

• A specialized CAD-to-CAD interoperability capability.

Suggested response:

> "Mark43 is an established CAD/RMS provider. We recognize the importance of protecting your dispatch operations. NexCort iQ is developing a modular alternative, but we would first like to understand whether there are workflows your existing environment doesn't address. We can evaluate those separately from any future CAD replacement decision."

Sales recommendation: Do not promise that NexCort CAD/RMS can replace Mark43 until the necessary mission-critical functions, integrations, security controls, and operational testing are complete.

---

4. Campus and K-12 competitive comparison

For NexCort iQ Campus, the most valuable differentiation may come from **combining student safety, no-app access, dispatch integration, and security operations**.

The major competitors to investigate include CriticalArc SafeZone, Rave Mobile Safety, Everbridge, and CrisisGo.

Feature-by-feature comparison

The following table identifies competitive focus areas, not a verified absence of individual features.

Capability	NexCort iQ Campus	Competitor to investigate
Campus emergency alerts	Campus Alerts	Rave, Everbridge
Student safety reporting	QR/NFC reporting	CriticalArc, Rave
Virtual safety escort	Escort iQ	CriticalArc and other personal-safety vendors
Friend/family monitoring	Not a shipped module	Personal-safety applications
Live location sharing	Pinpoint iQ	CriticalArc
Campus police integration	CAD connectors	CriticalArc, Rave

Capability	NexCort iQ Campus	Competitor to investigate
Campus dispatch	NexCort CAD	Established CAD vendors
No-app access	QR/NFC browser workflows	Verify competing browser/SMS capabilities
AI incident assistance	Campus console	Compare vendor-specific AI products
K-12 emergency workflows	Dedicated K-12 configuration	CrisisGo, Rave

Known customers and market presence

CriticalArc, Rave, Everbridge, and CrisisGo are established participants in institutional safety markets. However, a named university should not be classified as a current customer without checking a recent case study, procurement award, or institutional announcement.

For your sales team, the most valuable intelligence is not simply knowing which university purchased a competitor. It is identifying **the specific modules deployed, the contract renewal date, and the capabilities the university still needs**.

Competitive opportunity: Existing emergency blue-light systems

NexCort iQ could approach universities operating traditional emergency blue-light infrastructure.

The sales opportunity is not necessarily to remove every physical blue-light device. Some campuses may need to retain physical emergency communication infrastructure for accessibility, redundancy, or local safety requirements.

Instead, NexCort iQ can propose adding QR/NFC safety access, digital reporting, location sharing, and dispatch connectivity.

Suggested response when a university says it already has Rave:

> “That's excellent. We're not proposing that you eliminate a functioning emergency notification system. We'd like to explore whether your students have convenient ways to request an escort, share their location, or report an incident without downloading another application. We can also examine how those reports reach campus police.”

Suggested response when a university says it already has SafeZone:

> “SafeZone offers substantial campus safety functionality. We'd be interested in learning which capabilities your university uses today and whether there are gaps involving visitor access, existing dispatch systems, or student adoption. We can focus a demonstration on those specific requirements.”

Recommended campus sales strategy

Offer a 60-day pilot with measurable objectives:

- Number of student safety interactions.
- Percentage of reports successfully routed.
- Time between report submission and operator acknowledgment.
- Escort request completion rate.
- Student and security-team satisfaction.
- Integration reliability.

Do not promise a cost reduction until NexCort iQ's total implementation, licensing, messaging, and support costs have been compared against the incumbent.

5. Venue competition

24/7 Software

Threat level: Critical

This is arguably NexCort iQ Venue's most important direct competitor.

24/7 Software states that its products are deployed across more than 80% of North America's four major professional sports leagues.

Its published customer references include SoFi Stadium, the Cincinnati Reds, and Melbourne Park. 24/7 Software

Feature comparison

Feature	24/7 Software	NexCort iQ Venue
Incident reporting	Yes	In the product
Guest text communication	Yes	In the product
Incident dispatch	Yes	Venue console
Activity tracking	Yes	Planned
Operational analytics	Yes	Planned
Maintenance management	Yes	Not a primary focus
Inspections	Yes	Not a primary focus
Live mapping	Advertised	Planned
QR/NFC incident access	Verify implementation	In the product
AI-assisted incident analysis	Verify product-specific capabilities	Planned
CAD interoperability	Verify supported interfaces	Planned
Consent-based video sharing	Verify	Rapid Vision; Ring is off

Competitive weakness to investigate

24/7 Software is a comprehensive venue operations platform.

NexCort iQ should not attempt to replicate every maintenance, facilities, and guest-service feature immediately.

Instead, focus on a narrower question:

Can NexCort iQ deliver a specialized safety and incident-intelligence layer that connects venue security with outside public safety agencies?

That may be a more practical entry point.

Suggested sales response

> “24/7 Software has a strong venue operations platform. NexCort iQ focuses on public safety intelligence and incident coordination. We're interested in demonstrating how guest-generated reports, live location information, and security workflows could connect with your existing operations and external emergency responders.”

Best targets

I would prioritize convention centers, midsize arenas, university athletic facilities, and venues that are evaluating upgrades to their existing security operations.

These organizations may offer more accessible pilot opportunities than major professional sports franchises with deeply embedded vendor relationships.

---

6. Transit competition

Genetec

Threat level: High

Genetec Mission Control already provides incident analysis, automated workflows, event correlation, dispatch coordination, and integrations with security systems.

Genetec advertises an ecosystem exceeding 900 integrations. This is a significant competitive advantage, particularly for agencies with established camera and access-control infrastructure. Genetec

Capability	Genetec Mission Control	NexCort iQ Transit
Security incident management	Yes	Transit console
Automated response workflows	Yes	Planned
Camera system integration	Yes	Planned integrations
Security event correlation	Yes	Planned
Dispatch coordination	Yes	Transit console
Operational reporting	Yes	Planned
Rider QR reporting	Verify	In the product
Rider location sharing	Verify	Pinpoint iQ
CAD-to-CAD interoperability	Verify	Planned
Transit-specific AI intake	Verify	Rider QR intake

Competitive opportunity

Genetec is strong in security-system integration.

NexCort iQ could differentiate through rider-initiated reporting, passenger communication, and incident workflows connecting transit operations with outside emergency response agencies.

Suggested sales response:

> “Genetec is a powerful security management platform. We're interested in the passenger side of incident reporting. How does a rider report an emergency, share an accurate location, and receive acknowledgment from your security team today? That's the workflow we'd like to evaluate with you.”

For MARTA, NJ Transit, and other transit prospects, that question could help identify opportunities without requiring a replacement of their existing video-management infrastructure.

---

7. Consolidated competitive intelligence matrix

The table below prioritizes competitors by market relevance and identifies the sales opportunities worth investigating.

Competitor	Vertical	Competitive strength	NexCort iQ opportunity	Priority
RapidSOS	PSAP	Emergency data network and AI	Specialized workflows and interoperability	Critical
Axon	PSAP / CAD / RMS	Integrated public safety ecosystem	Vendor-neutral extensions	Critical
Mark43	CAD/RMS	Established cloud CAD/RMS	Supplemental tools and smaller deployments	Critical
Motorola Solutions	CAD/RMS	Dispatch, radio, and public safety infrastructure	Cross-platform interoperability	Critical
CentralSquare	CAD/RMS	Public safety software portfolio	Modernization and integration	High
Tyler Technologies	CAD/RMS	Government technology relationships	Targeted supplemental functionality	High
Versaterm	CAD/RMS	Public safety workflows	Interoperability and specialized AI	High
Aurelian	PSAP	Non-emergency AI automation	Broader incident workflow integration	High
CriticalArc	Campus	Personal safety and response coordination	No-app access and dispatch integration	Critical
Rave Mobile Safety	Campus / K-12	Emergency communications	Additional student safety workflows	High
Everbridge	Campus / Enterprise	Critical event management	Campus-specific reporting	High
CrisisGo	K-12	School emergency response	Integrated K-12 safety operations	High

Competitor	Vertical	Competitive strength	NexCort iQ opportunity	Priority
24/7 Software	Venue	Venue incident and operations management	Public safety integrations	Critical
Genetec	Venue / Transit	Security-system integration	Rider and guest reporting	High

Evidence limitation: This is a strategic comparison, not a completed procurement-grade verification of every vendor. The earlier battlecards contain publicly documented examples; unverified integration coverage, current customer contracts, and feature gaps remain research items.

8. Five questions every NexCort iQ sales representative should ask

These questions are designed to uncover opportunities without making unsupported claims about competitors.

Question 1 — Existing technology

“What platform are you currently using for emergency communications, incident management, or dispatch?”

This establishes the incumbent.

Question 2 — Unresolved problems

“What is one capability you wish your current platform handled better?”

This identifies the customer's actual pain point.

Question 3 — Integration

“Do your existing systems communicate directly with one another, or does your team have to manually transfer information?”

This tests the need for interoperability.

Question 4 — Contract timing

“When is your current agreement scheduled for renewal, and are you evaluating any additional capabilities before then?”

This identifies the procurement window.

Question 5 — Pilot opportunity

“Would you be open to a limited demonstration or pilot that evaluates a specific operational challenge without disrupting your existing systems?”

This creates a potential next step.

9. Recommended sales positioning by competitor

When the prospect says...	NexCort iQ response strategy
“We already use RapidSOS.”	Explore complementary workflows and interoperability.
“We have Axon.”	Identify requirements involving non-Axon systems and specialized workflows.

When the prospect says...	NexCort iQ response strategy
“We use Motorola CAD.”	Discuss integrations rather than immediate CAD replacement.
“We have Mark43.”	Ask about unresolved dispatch, reporting, and interoperability requirements.
“We already have Rave.”	Focus on student reporting, escorts, and operational response.
“We use SafeZone.”	Explore no-app access, visitor workflows, and existing-system integration.
“We have 24/7 Software.”	Explore specialized public safety coordination beyond venue operations.
“We use Genetec.”	Focus on passenger reporting and connections to external response agencies.
“We aren't replacing our current system.”	Offer to evaluate a standalone capability.
“We don't have a budget.”	Explore future funding cycles and a properly scoped pilot.

The recurring message should be:

NexCort iQ does not need to replace an agency's existing technology to begin delivering value.

That claim should be supported by a demonstrated integration or standalone workflow for each customer.

---

10. What I would prioritize next for NexCort iQ

Based on the company's product strategy, I would organize competitive intelligence into three tiers.

Tier 1 — Immediate sales intelligence

Focus on:

• RapidSOS

• Axon / Prepared / Carbyne

• Aurelian

• CriticalArc

• Rave

• 24/7 Software

These competitors are directly relevant to NexCort iQ's AI, campus, and venue sales conversations.

Tier 2 — CAD/RMS development intelligence

Focus on:

• Mark43

• Motorola Solutions

• CentralSquare

• Tyler Technologies

• Versaterm

These competitors should influence technical requirements, integration priorities, reliability testing, and the future CAD/RMS product roadmap.

Tier 3 — Market expansion intelligence

Focus on Genetec, transit security vendors, school safety platforms, and specialized incident-management providers.

These become increasingly important as NexCort iQ expands into transit, airports, and larger venues.

Final recommendation

I would turn this analysis into a **living competitive intelligence database inside NexCort iQ's CRM**.

Each competitor record should include its confirmed products, AI features, integrations, customer references, published contract values, renewal opportunities, evidence links, and sales objection responses.

Most importantly, I would use four distinct feature classifications:

- **Confirmed competitor capability**
- **Not publicly verified**
- **NexCort iQ production-ready capability**
- **NexCort iQ planned or in-development capability**

This prevents sales representatives from confusing a feature that has not been publicly documented with one that a competitor does not offer.

The most promising competitive strategy is to win narrowly defined operational workflows first, establish measurable customer results, and expand into larger platform contracts once NexCort iQ has the evidence to support them.

Feature-by-Feature NexCort iQ Differentiators

Addendum to Competitive Intelligence & Sales Battlecards | October 2026

How to use: The differentiators below are proposed sales positioning based on NexCort iQ product plans, not independently proven superiority claims. Confirm production readiness, integration coverage, and customer-specific value before making external promises.

911 / PSAP — Core and Call Assist

FEATURE	OUR DIFFERENTIATOR	SALES / EVIDENCE GUARDRAIL
AI-assisted call handling	Human-in-the-loop suggestions presented alongside existing CAD; designed to augment, not automatically replace, dispatcher judgment.	Proposed workflow differentiator; test latency, accuracy and operator override.
Non-emergency call automation	Structured 311/non-emergency intake, human escalation and optional SMS self-service routing tied to incident workflows.	Confirm live telephony, escalation and handoff integrations.
Live caller location — Pinpoint iQ	Opt-in SMS location sharing with accuracy radius, live/stale/lost status and optional movement trail visible to dispatch.	Validate location accuracy and consent handling.
Consent-based video — iQ Vision	Permission-gated video access linked to incident context, rather than indiscriminate camera surveillance.	Camera vendor access is dependent on approvals; Ring integration is inactive.
AI translation — Translate	Bidirectional caller/dispatcher assistance with language detection, integrated into the active incident workflow.	Benchmark languages, accuracy and escalation to human interpreters.
Pre-Arrival iQ	Dispatcher-supervised, step-by-step SMS guidance with YES/NO/STARTED/DONE acknowledgments and progress visibility.	Protocol/medical review and operational approval required.
CAD-to-CAD interoperability	Vendor-neutral hub design targeting up to eight concurrent agency-scoped connectors and human-approved write-back.	Connector availability and actual supported CAD vendors must be demonstrated.
Surge View	Groups likely related 911 calls by time, location and incident type to help dispatchers manage surges.	Verify clustering quality and false-positive handling.
QA and analytics	Combines case context, operator workflow signals and after-action reporting rather than a standalone QA dashboard.	Demonstrate reporting metrics and audit trails.
Responder ETA messages	Agency-controlled SMS updates using dispatch/AVL information, with explicit rules for withholding uncertain ETAs.	In Pre-Arrival iQ. A precise minute is withheld. Still needs approved policy and reliable AVL.
Silent Text	Silent Text is in the product and stays off until the agency flag is on. Continuity Log and Hang-up Alerts are not confirmed shipped modules.	Do not sell Continuity Log or Hang-up Alerts as live.

Cloud CAD / RMS — developing product

FEATURE	OUR DIFFERENTIATOR	SALES / EVIDENCE GUARDRAIL
Cloud-native CAD	Potential shared architecture with NexCort incident intelligence while preserving modular deployments.	Under development; not positioned as production-ready.
Cloud-native RMS	Intended structured records and reports tied to incident histories and authorized agency workflows.	Under development; records retention and compliance need validation.
Unit dispatch and incident management	Targeted workflow from call intake through incident assignment, status updates and closure.	Mission-critical performance and failover not yet established.
Field responder workflows	Targeted continuity of incident context between dispatcher and field personnel.	Field clients and radio interoperability must be validated.
Third-party CAD/RMS integrations	Interoperability-first design with agency-scoped credentials, audited exchanges and controlled write-back.	Actual integrations are vendor- and agency-dependent.
Multiagency data sharing	Proposed cross-jurisdictional exchange without requiring agencies to standardize on one CAD brand.	Security, data ownership and interface agreements required.

Campus and K-12

FEATURE	OUR DIFFERENTIATOR	SALES / EVIDENCE GUARDRAIL
Campus Alerts	SMS registration, annual re-verification and STOP/HELP workflows; intended for higher education.	Higher-ed only; not part of K-12 offering.
Escort iQ	No-app QR/NFC entry to GPS escort, in-person escort requests, optional video/voice and supervisor ETA checks.	Higher-ed only. Off until the campus flag is enabled.
Friend walk	No module named Buddy Safe is in the product. Do not sell a friend or family walk under that name.	Do not offer the name Buddy Safe.
Student incident reporting	Low-friction QR/NFC/browser access for students and visitors, routing into a campus security console.	Confirm visitor access and dispatch integration in pilot.
Campus CAD integration	Designed to feed incident reports to campus police workflows while allowing deployments without full CAD replacement.	Validate interface support at each institution.
K-12 safety configuration	Distinct school-focused safety workflows and restricted feature set, avoiding higher-ed escort/friend-monitoring features.	Do not claim Campus Alerts, Escort iQ, or a friend-walk product for K-12.

Venue and Transit

FEATURE	OUR DIFFERENTIATOR	SALES / EVIDENCE GUARDRAIL
Guest incident reporting	QR/SMS guest reporting mapped to venue zones, with routing to security operations instead of only a general inbox.	Validate connectivity and event-scale throughput.
Venue SOC incident console	Targeted single view of incoming reports, camera context and assigned security response.	Camera integrations and operational deployment need verification.
Venue-to-public-safety coordination	Potential controlled transfer of incident context from venue security to outside responders.	Interagency agreements and interfaces required.
Transit rider reporting	Rider-facing incident intake with location/route context, security triage and acknowledgment.	Verify agency system and mapping integrations.
Transit security console	Targeted connection of passenger reports, operator incidents and response coordination.	Do not claim replacement of established VMS/security systems.
Camera context across verticals	Incident-linked, consent- and access-controlled visual context rather than indiscriminate feed aggregation.	Third-party rights and vendor approvals are prerequisites.

Rep-ready positioning: lead with the prospect’s unresolved workflow, show only demonstrable capabilities, and propose a narrowly scoped pilot with measurable outcomes. Do not characterize an unverified competitor feature as absent.
