

NEXCORT iQ · INTERNAL PRODUCT REQUIREMENTS

Pilot Readiness & Production Tightening Plan

Current-state plan for controlled agency pilots and production hardening. Replaces the 2025 Rapid Cortex 14-day draft.

Legal entity: Apps on Demand LLC (Wyoming) · Product: NexCort iQ · Marketing: www.nexcortiq.us · Ops: app.rapidcortex.us · (404) 520-1747 · jeff@nexcortiq.us

Objective

NexCort iQ is a real-time public safety intelligence platform that enhances — and does not replace — 911 dispatch, CAD, telephony, dispatchers, or medical direction. Pilot readiness means boring reliability: tenant isolation, fail-closed CAD write-back, human-in-the-loop AI, auditability, and accurate agency-facing language.

Always true

- A human stays in the loop. AI suggests; it does not dispatch, diagnose, or write to CAD unsupervised.
- CAD write-back is fail-closed at product, API, and infrastructure layers unless a signed addendum and explicit config enable it.
- Do not claim CJIS certification or SOC 2 certification. Say CJIS-aware / SOC 2 Type II documentation in progress.
- Sales contractors see feature catalogs without list prices. Commercial numbers require Sales Director approval.

Pilot scope — include now

Capability	Notes
Live dispatcher workspace	Queue, intake, caller panel, location, media, transcription, SOP coaching.
Supervisor floor + QA	Active-call monitoring, scorecards, coaching notes. Audited watch indicator.
NC Translate	Bidirectional live translation (100+ languages). Human review wording on AI output.
Caller media + Video Assist	Expiring SMS/web links; WebRTC video; no citizen app; encrypted storage.
CAD read-only / CAD Assist	Context panel only. Nature-code mapping may be configured; no writes.
Audit + agency-scoped reporting	User, agency, incident, action, timestamp. 7-year retention target for gov records.
Admin onboarding + RBAC	Canonical roles; agencyId from session never URL; vertical isolation enforced.
Call Assist (optional SKU)	Non-emergency only. TRANSFER_911 hardcoded. Never lands on the 911 console.

Pilot scope — hold until later

- CAD write-back (requires signed addendum, discovery workshop, and go/no-go).
- CAD-to-CAD mesh and Agency Share without dual-admin consent.
- NCIC / CJIS-protected query access.
- Automated dispatch decisions or medical/legal command replacement.
- Any feature that appears to replace dispatcher judgment.
- NexIQ Vision and citizen camera share unless the pilot SOW names them and roles are authorized.

Current hardening workstreams (October 2026)

Workstream	Status / remaining
RBAC and tenant isolation	Canonical roles live (PSAP + verticals + salescontractor). Continue CI tests that wrong roles get 403 and no cross-agency rows.
Security controls	Cognito MFA, 60-day password rotation, WAF, CORS allowlist, Secrets Manager ARNs. Keep evidence pack current.
CAD safety	Write-back default off in web, API (CAD_WRITEBACK_ENABLED), and CloudFormation. Pilot = read-only unless addendum.
Deployment	Nested SAM stacks, ECS web on app.rapidcortex.us, engineering staging isolated. Rollback + health checks required before expand.
Evidence and sales packet	Sales Guide, feature catalog (no prices for contractors), this PDF set, security statement, onboarding checklist.

Production readiness principle

Be boringly reliable before becoming bigger. First pilots demonstrate controlled decision support, strong isolation, and clear audit records — not maximum feature count. If a P0 go/no-go gate fails, do not expand the pilot or market production-ready.
