

NEXCORT iQ · INTERNAL PRODUCT REQUIREMENTS

Production Go / No-Go Checklist

Hard gates before any production or expanded-pilot release. If a P0 fails, stop.

Legal entity: Apps on Demand LLC (Wyoming) · Product: NexCort iQ · Marketing: www.nexcortiq.us · Ops: app.rapidcortex.us · (404) 520-1747 · jeff@nexcortiq.us

P0 gates

Gate	Requirement	Pass / Fail	Evidence
Authentication	Login, logout, reset, MFA, expired-password redirect, role routing, session timeout.		
Authorization	Every API route: identity first, then AuthorizationService + agencyId. Wrong role = 403.		
Tenant isolation	Automated tests prove Agency A cannot read Agency B. No Scan without agency filter.		
CAD safety	Write-back fail-closed (web + API + infra). No unsigned write-back in this release.		
Media security	No public media URLs; expiring links; encrypted storage.		
Auditability	Create/update/delete/status and CAD/media actions logged (user, agency, action, time).		
Deployment	Rollback tested; health checks and alarms active; SAM size/IAM NoValue checks green.		
Backup / restore	Backup and restore test completed for in-scope data stores.		
Legal / disclaimer	Decision-support language visible in app, site, and pilot docs. No CJIS/SOC2 certification claims.		
Support	Incident response contact and escalation documented.		

No-go conditions

- Any evidence of cross-tenant data exposure.
- Any secret in frontend, git, or Lambda environment (use Secrets Manager ARNs).
- Public S3 / KVS / media access.
- Unstable login or role routing (including product verticals collapsing to dispatcher).
- Missing audit logs for critical actions.
- No rollback path, or CAD write-back enabled without signed addendum.
- No documented incident response process.

Recommended release decision

If any P0 gate fails, do not expand pilots or market the system as production-ready. Fix, retest, attach evidence, then proceed. Sales language remains: tailored deployment, custom quote, contact sales — not unpublished rate tables.
