QR & NFC Setup Guide

Create report codes in the web console and program NFC tags with the NexCort iQ Field app — no third-party QR generators or NFC Tools required.

Legal entity: Apps on Demand LLC · Marketing: www.nexcortiq.us · Ops console: app.rapidcortex.us · (404) 520-1747 · jeff@nexcortiq.us

How the pieces fit

Surface	What you do there
Web console (app.rapidcortex.us)	Create location codes, download QR PNGs, view analytics, activate/deactivate.
NexCort iQ Field app (iOS / Android)	Program NFC tags and scan/verify posted QR codes for a location.
Public phone (no app)	Student / guest / rider scans QR or taps NFC → safety report form for that zone.

NOTE — Create / download / deactivate codes: Campus Admin & Supervisor; Venue Admin, Supervisor & Operator; Transit Admin & Supervisor; RC platform operators (rcadmin / rcitadmin / rcsuperadmin). **PSAP roles are excluded** — dispatcher, supervisor, agencyadmin, and agencyit do not manage campus/venue/transit QR & NFC. Program NFC tags in the Field app: the create roles above, plus Campus Security, Venue Security, and Transit Security for existing codes.

A — Create a QR / NFC code (browser)

- Sign in at app.rapidcortex.us with a Campus, Venue, or Transit admin/supervisor account (or Venue Operator).
- Open **QR Codes** (or **QR & NFC**) from your vertical console sidebar — not the PSAP dispatcher workspace.
- Tap **+ New** / create code. Enter name, zone/building/gate/vehicle, report type, and vertical.
- Click **Download PNG**. Print at least **2 in** on wall signs (see QR Installation Guide for sizes).
- Optional: assign cameras / vehicle / station / route so a scan opens the right context.

WARNING — Create one code per physical sign. Never reuse a URL across locations — you will not know where the report came from. Do not use a third-party QR generator; only NexCort-generated codes route and track correctly.

B — Program an NFC tag (Field app)

- Install the NexCort iQ / NexiQ Field app (App Store or Google Play). Sign in with the same credentials.
- Open QR & NFC → select the location you created → **Program NFC Tag**.
- Hold an **NTAG213** sticker to the phone (iPhone: top edge; Android: center back) until write succeeds (~2 seconds).
- Tap-test the tag — the safety report form for that location must open. Then mount the sign.

TIP — QR and NFC on the same sign share the same location. QR works on every camera phone; NFC is faster on newer phones. Put both on the sign for full coverage. Free Community Connect = one zone only; paid Multi-zone QR/NFC expands sites.

Trade-show / booth signs (not location codes)

Booth visitors should open the public marketing site — not a campus/venue report form. In the Field app, use **Trade show signs** and choose Home or Demo, then print the QR and Program NFC Tag.

Type	URL	Opens
Home	https://www.nexcortiq.us	Company / product homepage
Demo	https://www.nexcortiq.us/demo/ (or current demo path)	Product demo — not a live tip form

What you need

Item	Details
Admin / Field login	Campus, Venue, or Transit role with QR manage (or Security for NFC program only).
NTAG213 stickers	Amazon pack of ~100; round/square white. NTAG215/216 work but are unnecessary.
Printer	Laser preferred; matte label/cardstock for QR. Min 1.5 in desk · 2 in wall · 3 in hallway.

Quick troubleshooting

Problem	Fix
NFC not detected	Enable NFC. Move tag slowly over antenna (iPhone top / Android center).
Wrong page opens	Rewrite from Field app Program NFC Tag. Location vs trade-show Home/Demo.
QR won't scan	Min size, quiet zone intact, matte finish, no stretched PNG. Re-download from console.
Write failed	NFC on; hold still; stay in Field app — do not use NFC Tools.
