

NEXCORT IQ — INTERNAL PRICING GUIDE

SALES DEFINITIONS (Catalog date: October 2026)

In-depth sales definitions for every sellable service — how to explain it, who buys it, how to position it, and what it is not. Not a technical design doc. Prices live on the other tabs; this tab is language only.

HOW TO USE: Filter by Category. Use column D on calls and in proposals. Column G prevents overselling. Yellow cells on Quote Builder still hold prices — this tab is words only.

Category	Service / SKU	One-Line Pitch	Sales Definition (in depth)	Who Buys This	How to Sell It	What It Is NOT	See Sheet
BASE PLANS							
Base Plans	NexCort iQ Essential	AI-assisted intake for small PSAPs without replacing CAD.	Essential is the low-risk entry plan for small municipalities, single-site PSAPs, and grant-funded pilots (typically up to ~10 dispatcher seats). The agency gets the web and desktop apps, RBAC, core reporting, audit logs, AI-assisted intake, live transcription, and basic call workflows. Full dispatcher console, deep QA, and full multilingual depth stay Limited — those are the Professional upsell. Position Essential as modernization that sits beside their existing CAD and telephony, not a rip-and-replace. Recommended for first-reference customers and 90-day pilots.	Small city / town PSAPs, pilot sponsors, grant-funded first deployments	Lead with low commitment and grant fit. Show intake + transcription value in week one. Park CAD write-back and Command suites for later.	Not a full command platform; not a CAD replacement; not full QA/translation out of the box	Essential
Base Plans	NexCort iQ Professional	Full intelligence layer for growing counties and cities — translation, QA, and analytics included.	Professional is the standard production plan for growing counties and mid-size cities (typically up to ~25 dispatcher seats). It includes everything in Essential plus the full dispatcher monitoring console, live translation, caller photo/video upload, supervisor QA tools, scorecards, coaching notes, team dashboards, and incident timeline reconstruction. Priority support is included. This is the plan most agencies should land on after a successful Essential pilot. Major incident / war-room / reliability suites remain add-ons or Command upgrades.	County and city ECC directors, supervisors who want QA + translation without Command complexity	Sell the jump from Limited → Included: translation, QA, media, and supervisor dashboards. Use pilot results to justify the step-up.	Not regional command / multi-EOC; not automatic CAD write-back; war rooms still add-on	Professional

Base Plans	NexCort iQ Command	Command and coordination platform for large agencies and major-incident environments.	Command is for large agencies and regional command environments (typically up to ~75 seats) that need major-incident management, command dashboards, war rooms, runbooks, stakeholder status pages, alert correlation, escalation, on-call routing, and reliability reporting — all included. Use this when the buyer's pain is coordination across teams and partners during storms, MCI, or large events — not just call-taking. Premium onboarding and dedicated rollout planning are included. Custom CAD connectors and dedicated support engineers remain scoped add-ons.	Large PSAPs, regional centers, agencies with formal EOC / major-incident programs	Lead with war rooms, runbooks, and command dashboards. Emphasize coordination value during the last big event they remember.	Not Enterprise multi-agency statewide; not a free path to CAD mesh or write-back	Command
Base Plans	NexCort iQ Enterprise / Statewide	Custom multi-agency or statewide programs — priced and scoped as a program, not a menu.	Enterprise covers multi-agency, statewide, or complex multi-site programs (often 50–500+ seats) with custom security reviews, multi-site deployment support, and negotiated commercial terms. Do not quote Enterprise from a simple seat calculator — engage Solutions / Sales Director early. Expect longer discovery, multiple stakeholders (state 911 boards, shared CAD vendors, IT security), and staged rollouts by agency or region.	State 911 authorities, multi-jurisdiction consortia, large metro consolidations	Treat as a program sale: discovery workshop → phased SOW → reference architecture. Never discount below Discounting Rules without approval.	Not a self-serve SKU; not a one-week pilot package	Enterprise

PRODUCT VERTICALS

Product Verticals	RC Campus	Campus safety reporting layer — QR/NFC/SMS tips without forcing an app download.	RC Campus is sold to universities, colleges, and K–12 on a per-enrolled-student annual model (see Campus sheet for rate and minimums). Students and staff report via QR, NFC, or SMS; campus security gets a dedicated console — not the 911 dispatcher workspace. Base includes tip intake, two-way chat, photo/video, incident timeline, basic Clery documentation log, and campus RBAC. Upsell AI summary, advanced Clery, zone QR, NexIQ Vision™, translation, analytics, Agency Share, and SMS location. Position as the missing safety layer between 'call 911' and 'ignore it.'	Campus safety directors, Clery coordinators, university IT / risk	Open with 'no app download' and Clery documentation. Land with tip adoption; expand into Vision, Clery module, and alerts.	Not a PSAP CAD console; basic Clery log is not the full Clery Act Compliance Module / legal advice	RC Campus
-------------------	------------------	--	--	---	--	--	-----------

Product Verticals	RC Venue	Fan-to-security reporting for stadiums, arenas, and events — zone-aware, no app required.	RC Venue prices by venue capacity tier (annual). Guests report from QR/NFC/SMS tied to section, gate, or zone; venue security and supervisors work an orange-branded venue console. Guest Services is a separate non-emergency console and must never be sold as 911 dispatch. Strong for event operators who already have cameras and access control but lack a guest reporting path into security. Upsell Vision cameras, live video, analytics, translation, and event-day onsite support.	Venue GMs, event security directors, stadium operations	Demo a section-level tip into the security console. Separate Guest Services from Security in every conversation.	Not a 911 ECC product; Guest Services console is not emergency dispatch	RC Venue
Product Verticals	RC Hospital	Hospital capacity and pre-alert coordination for EMS—hospital handoffs and MCI readiness.	RC Hospital is facility/bed-tier annual pricing for hospitals and health systems. Hospital staff update capacity and acknowledge pre-alerts in a hospital portal — they do not sit on the PSAP dispatcher console. Base includes staff/supervisor/admin/coordinator views, pre-alert intake, and timelines. Upsell MCI command, EMS data integration, Agency Share, analytics, and Hospital Routing Module. Sell into EMS coordinators and ED leadership who need faster, cleaner pre-alerts — not into the 911 floor as a replacement console.	Hospital EMS coordinators, ED leadership, health-system emergency management	Lead with pre-alert acknowledgment and capacity visibility. Attach MCI module for regional readiness grants.	Not a CAD; not a PSAP dispatch console; not a full EHR	RC Hospital
Product Verticals	RC Transit	Passenger-to-security reporting for bus and rail systems — vehicle and station aware.	RC Transit prices by fleet/system tier (annual). Passengers report via QR/NFC/SMS; transit security and supervisors use a transit ops console. Base includes reporting channels, two-way chat, media intake, timelines, and transit RBAC. Upsell Vision cameras, Agency Share, analytics, translation, SMS location, and alerts. Position for transit authorities that need a passenger safety channel without building a mobile app.	Transit authority security / safety directors, rail and bus ops leadership	Show a vehicle/station tip landing in the transit console. Bundle SMS location for outdoor stops.	Not a PSAP CAD; not AVL by itself (sell Map Unit Overlays separately where CAD/AVL exists)	RC Transit
Product Verticals	Call Assist (non-emergency product)	AI-assisted non-emergency call handling that keeps 911 off the non-emergency queue.	Call Assist is a standalone non-emergency product: greeting flows, classification, callbacks, operator console, and supervisor monitor. Emergency 911 is never in scope — the Safety Engine transfers immediately and that path cannot be suppressed. Users land on /app/call-assist/* — never the 911 dispatcher workspace. Sell to agencies drowning in non-emergency volume who want AI help without putting automation on the 911 console. Module list price is the starting point; CAD push, RMS drafts, TTY, and external routing are optional expansions. Never free.	ECC directors, non-emergency call center managers, city service line operators	Quantify non-emergency volume first. Promise containment and warm transfer — never ‘AI answers 911.’	Not a 911 dispatcher console; not an unsupervised bot on emergency lines; CAD/RMS push stays human-reviewed	Feature Add-Ons

CAD INTEGRATION							
CAD Integration	CAD Discovery Workshop	Paid discovery that decides what CAD integration is actually possible.	A structured workshop with PSAP, IT, and CAD vendor stakeholders to map fields, environments, nature codes, and write-back risk. Sell this before promising any CAD connectivity. Basic / Standard / Advanced tiers exist by complexity. Output should be a field-mapping understanding and a clear go/no-go on read-only vs write-back. Always remind buyers: NexCort iQ enhances CAD — it does not replace it.	Agency IT, CAD admins, ECC leadership	Make discovery a required gate before any integration quote. Use it to protect the deal from over-promising.	Not the integration itself; not permission to enable write-back	CAD Integration
CAD Integration	CAD Read-Only Integration	One-way CAD context into NexCort — zero risk to the system of record.	Pulls CAD incident/unit context into the NexCort workspace so dispatchers see structured CAD data while they work. No write path into CAD. This is the default first integration for every PSAP. Complexity tiers (Simple → Advanced) drive one-time fees. Annual maintenance is typically 15–20% of the integration fee, billed separately.	Agency IT + ECC ops who want intelligence without CAD risk	Position as the safe first step. Prove Context Cards / unit awareness before discussing write-back.	Not write-back; not multi-CAD mesh; not AVL overlays by itself	CAD Integration
CAD Integration	CAD Assisted / Automated Write-Back	Human-reviewed (or tightly gated automated) posting into CAD — never in pilot base.	Assisted write-back lets a dispatcher/supervisor submit proposed CAD updates that require human approve/reject with attestation. Automated write-back is rare, agency-explicit, and still fail-closed at every layer. Requires signed CAD write-back addendum and completed discovery. Complexity tiers set one-time fees. RULE FOR EVERY REP: do not include full CAD write-back in pilot base pricing — scope separately after discovery.	Mature PSAPs with IT sponsorship and vendor cooperation	Sell only after read-only success. Emphasize human review and fail-closed design to CAD vendors and CJIS stakeholders.	Not silent automation by default; not included in pilots; not a substitute for CAD training	CAD Integration
CAD Integration	Multi-CAD Connector / CAD-to-CAD Mesh	Regional multi-CAD awareness for mutual aid — high trust, never free.	Connects multiple CAD systems under one tenant and/or enables controlled CAD-to-CAD mesh awareness across mutual-aid partners. This is a Command+-class commercial SKU and a high-complexity delivery. Never offer complimentary. Expect dual-admin consent patterns similar to Agency Share, careful scoping, and longer timelines. Additional CAD vendor connectors are separate one-time fees.	Regional centers, mutual-aid heavy counties, multi-CAD enterprises	Sell into regional readiness and mutual-aid conversations — not single-agency pilots.	Not free; not a weekend install; not automatic write-back across agencies	Feature Add-Ons / CAD Integration

CAD Integration	Map Unit Overlays (AVL)	See units on the map with status and ETA from the CAD/AVL feed.	Shows real-time apparatus markers on operational maps using the agency's CAD/AVL feed — unit status, distance, ETA. Command+ monthly add-on. Soft-fails cleanly when the feed is unavailable so the rest of the console still works. Strong visual sell in demos; confirm AVL feed access in discovery.	Dispatchers and supervisors who already have AVL in CAD	Demo during a live or replayed call with unit motion. Confirm feed availability before quoting.	Not a standalone AVL system; not GPS tracking invented by NexCort	Feature Add-Ons / CAD Integration
CAD Integration	NG911 Assist	Helps i3-aware PSAPs with diversion, EIDO/additional data, and NG911 metrics — not a phone system replace.	Assist pack for agencies mid-NG911 / i3 upgrade: diversion support, EIDO/additional data assist, and NG911 metrics. There is no single list SKU in the billing catalog yet — quote after ESInet/i3 discovery using the internal range on Feature Add-Ons. Position as meeting them where their NG911 program is. Do not promise telephony rip-and-replace or ESInet replacement.	PSAP directors and IT leads in active NG911 programs	Ask about ESInet vendor and i3 readiness first. Scope a discovery-led quote — don't invent a fixed SKU on the call.	Not a CPE/telephony replacement; not automatic NG911 certification	Feature Add-Ons
VISION & CAMERAS							
Vision & Cameras	NexIQ Vision™ — Standard / Professional / Enterprise	Agency cameras on the live incident — with AI scene assist for authorized roles.	NexIQ Vision™ (formerly NexCort iQ Connect) links existing ONVIF/RTSP facility cameras into the incident console so responders and dispatch/security see the scene without leaving the workflow. Tiers: Standard (up to 10 cameras), Professional (up to 50), Enterprise (unlimited / multi-site KVS). Includes pathing for AI scene observations and vision transcripts for authorized roles — always human-in-the-loop, never autonomous enforcement or facial-recognition promises unless product docs explicitly support them. Never free.	PSAP supervisors, campus/venue/transit security leaders with camera estates	Ask how many cameras and which zones matter on day one. Start Standard; expand by camera count.	Not a VMS replacement; not autonomous policing; not free 'camera access'	Feature Add-Ons
Vision & Cameras	Citizen Camera Share (Ring / Nest / Wyze)	Caller or resident grants a time-limited live camera view into the incident.	Consent-based, time-limited share from citizen cameras (Ring live, Nest/Wyze share paths) into the incident workspace. Strong for residential 911 and campus residential life. Privacy language matters: temporary share with consent — not permanent surveillance takeover. Pair with NexIQ Vision™ agency cameras for a complete 'see the scene' story.	Residential-heavy PSAPs, campus safety, community policing programs	Lead with consent and time limits. Demo the one-tap share from SMS where available.	Not permanent camera takeover; not a Ring reseller contract by itself	Feature Add-Ons

Vision & Cameras	Camera Integration Setup (one-time)	Paid setup to bridge cameras correctly the first time.	One-time professional services to configure RTSP/ONVIF bridges, zones, and provider connections per camera provider. Quote per provider when the estate is complex. Prevents 'cameras don't show up on go-live' failures that kill executive confidence.	Agency IT / physical security teams	Always attach setup when selling Vision Professional/Enterprise or multi-provider estates.	Not the monthly Vision subscription	Feature Add-Ons
INTELLIGENCE & ANALYTICS							
Intelligence & Analytics	iQ Reporting	Daily agency analytics for leaders — never on the dispatcher console.	iQ Reporting is the supervisor/agency-admin analytics surface across verticals (911, campus, venue, transit, hospital). It answers 'what happened yesterday/this week' with daily aggregated metrics — not a live dispatcher tool. RBAC blocks dispatcher and front-line roles. On Professional/Command it is included; on Essential sell it as an add-on aligned to the Command Intelligence list band until a dedicated SKU ships. Use it to win supervisors and agency admins who need accountability reporting for leadership and grants.	Supervisors, agency admins, campus/venue/transit admins — never front-line dispatchers	Show a supervisor-only dashboard. Stress that dispatchers are not distracted by reporting UI.	Not a dispatcher widget; not real-time CAD BI; not public open-data publishing	Feature Add-Ons
Intelligence & Analytics	Command Intelligence	Comms-ops intelligence for supervisors — different from the Incident Command Dashboard.	Command Intelligence is a Professional+ communications operations module: call volume, Call Assist containment, translation breakdown, repeat locations, and drill-downs for supervisors and command staff. It is not the same product as Incident Command Dashboard / war rooms. Sell to leaders who want operational intelligence about how the communications center is performing — especially where Call Assist or translation is in play.	Supervisors, communications managers, command staff	Clarify naming early: 'Command Intelligence' ≠ 'Incident Command.' Bring containment and repeat-location stories.	Not war rooms / major incident boards; not iQ Reporting's daily vertical pack (related but distinct)	Feature Add-Ons
Intelligence & Analytics	Incident Context Cards	Prior-call and officer-safety context on the live call — included in every plan.	Read-only cards during live 911/ops calls showing prior calls at the location, officer-safety flags, and labeled CAD/Vault sources. Included in all plans at \$0 list — use it as a universal value proof in every demo. Explicitly does not include JMS or criminal-history data. When Vault is purchased, Context Cards get richer historical location intelligence.	Every dispatcher and supervisor on any plan	Open demos with a Context Card on a repeat address. Upsell Vault when they ask for 'all-time' history.	Not NCIC/JMS; not criminal history; not a paid upsell by itself	Feature Add-Ons

Intelligence & Analytics	NexiQ Vault	Historical CAD/call archive that makes Context Cards smarter after migrations.	Read-only archive of prior CAD/call-record exports for agencies migrating systems or needing deeper location history. Search by address and enrich Context Cards with all-time intelligence. Command+ monthly add-on. No JMS or criminal-history data. Sell when the agency is mid-CAD migration or complains that 'we lose history every time we change CAD.'	Agency admins, supervisors, analysts on Command+ journeys	Attach to CAD migration deals and Context Card demos. Emphasize read-only and no criminal databases.	Not a RMS/JMS; not criminal history; not free	Feature Add-Ons
CONTINUITY & COMMAND							
Continuity & Command	Response Continuity System (RCS)	Keeps life-safety calls from falling through silent gaps — monitor, geofence arrival, closure gate.	RCS is a Professional+ life-safety persistence module: silent monitor queue, unit geofence arrival confirmation, audio sentinel, escalation paths, and a closure gate with supervisor-override audit. Sell to agencies worried about calls that go quiet, units that never confirm arrival, or closures without accountability. This is an operations-confidence sale, not a shiny AI demo.	PSAP supervisors and quality/ops leaders with life-safety accountability pressure	Tell the story of a quiet line / unconfirmed arrival. Walk the closure-gate audit path with supervisors.	Not silent illegal wiretaps; not a replacement for unit status in CAD	Feature Add-Ons
Continuity & Command	Mutual Aid & MCI Command	When the incident spans agencies, command still has one coordinated playbook.	Command tooling for mutual-aid activation and multi-casualty coordination across PSAP and hospital participants. Complements war rooms and hospital capacity/routing. Sell into regional readiness and grant-funded MCI modernization. Confirm which agencies and roles are in scope before promising a joint go-live.	Regional EMA, large PSAPs, hospital EMS coordinators	Pair with Hospital Routing / MCI modules and Incident Command suite. Great grant narrative.	Not automatic mutual-aid legal authority; not a radio system	Feature Add-Ons / Incident Command
Continuity & Command	Major Incident Management / Command Dashboard / War Rooms	Structured major-incident coordination instead of scattered phone trees and whiteboards.	These Incident Command add-ons (included in Command plan) give supervisors and command staff status boards, collaborative war rooms, and a decision-support command view while local CAD remains system of record. Sell for storms, active incidents, large events, and EOC activity. On Essential/Professional, package as add-ons; on Command, remind them it's already in the base so you can sell adjacent modules (PIO view, stakeholder pages, Mutual Aid).	Supervisors, agency admins, EOC liaisons	Replay their last big event. Show war room vs. group text chaos.	Not a replacement CAD; not public mass notification by itself	Incident Command
Continuity & Command	Runbooks / Playbooks	Approved steps under stress — so every shift runs the same play.	Operational runbooks/playbooks attached to incident types so staff follow approved steps during high stress. Content must be agency-owned and kept current — sell the discipline, not just the UI. Included or add-on depending on plan (see Incident Command / plan sheets).	Training officers, supervisors, agency admins	Ask who owns SOPs today. Offer to load their top 5 incident types in onboarding.	Not legal advice; not automatic SOP compliance certification	Incident Command

Continuity & Command	Escalation Bridge (live ops) vs Reliability Escalation Engine	Know which escalation you're selling — live incident path vs IT/ops reliability path.	Live ops Escalation Bridge routes active incident escalation into supervisor/command workflows. The Reliability Escalation Engine (Reliability Ops sheet) is for platform/IT alert promotion and on-call routing when systems degrade. Do not conflate them on a quote. Both matter; different buyers (ops floor vs agency IT/NOC).	Ops supervisors (live) vs Agency IT / NOC (reliability)	Ask whether the pain is 'calls escalating' or 'systems paging.' Quote the matching sheet.	Not interchangeable products; not a radio console	Feature Add-Ons / Reliability Ops
----------------------	--	---	---	---	---	---	-----------------------------------

AI & CALL INTELLIGENCE

AI & Call Intelligence	AI Triage Workflows	Structured AI prompts during intake — dispatcher stays in control.	Tiered AI triage (Basic → Premium by rule depth) that surfaces protocol-oriented suggestions while the call is live. Always position as decision support, never as replacing dispatcher judgment. Pairs with live transcription; without transcription most AI value collapses. Never offer core AI triage as complimentary on a paid order.	Dispatchers and supervisors; ECC directors buying consistency	Demo mid-call suggestions. Repeat: human remains accountable.	Not autonomous dispatch; not a protocol certification body	AI Intelligence
AI & Call Intelligence	AI Confidence Scoring	Shows when the model is unsure — so staff pause or escalate.	Confidence metadata on AI outputs so dispatchers and supervisors know when to trust, pause, or escalate. Upsell Advanced/Premium when the agency wants multi-factor scoring. Excellent objection-handler for 'we don't trust AI' — you're selling the brake pedal, not just the engine.	Risk-aware ECC leaders and QA supervisors	Show a low-confidence example and the human override path.	Not a guarantee of correctness; not automatic escalation policy	AI Intelligence
AI & Call Intelligence	AI Incident Summarization	Draft narratives for handoffs and AARs — humans edit before they become record.	Volume-tiered AI summaries that draft incident narratives for handoff and after-action use. Always human-editable. Sell time-back to supervisors and training units. Price by monthly call volume band.	Supervisors, training, agency admins	Show before/after summary time. Keep 'draft' language in every proposal.	Not an official CAD narrative without human acceptance	AI Intelligence
AI & Call Intelligence	AI Dispatcher Recommendation Engine	Structured recommendations under pressure — staff remain accountable.	Recommendation engine for dispatcher decisions based on live context. Standard vs Advanced tiers. High-value, high-scrutiny — scope carefully and keep human-accountability language airtight in writing.	Progressive ECC directors with strong training culture	Pair with QA and SOP libraries. Avoid over-promising outcomes.	Not autonomous unit recommendation into CAD	AI Intelligence
AI & Call Intelligence	SOP Protocol AI	AI aligned to the agency's own SOP/protocol library during intake.	Surfaces agency SOP/protocol guidance during intake so suggestions match local policy, not a generic script. Flagged. Sell after you know they have digitizable protocols and an owner who will maintain them.	Training officers, protocol coordinators, supervisors	Ask for their top protocol packs in discovery. Don't promise content creation for free.	Not a substitute for certified protocol instruction	Feature Add-Ons / product modules

LANGUAGE & TRANSCRIPTION

Language & Transcription	Live Transcription	Every word captured as the call happens — foundation for AI, QA, and audit.	Real-time speech-to-text in the dispatcher workspace. Core differentiator and never free. Transcripts feed AI, QA scorecards, disposition summaries, and audit. If budget is tight, protect transcription before nearly every other add-on — most intelligence value depends on it. Enhanced accuracy tiers upsell cleaner transcripts at higher volumes.	Every PSAP buyer	Make it non-negotiable in Professional+ narratives. Never 'throw in free.'	Not a courtroom stenographer guarantee; enhanced accuracy is a separate tier	Transcription / Essential—Command
Language & Transcription	Live Translation (PSAP)	Understand non-English callers faster inside the telecommunicator workflow.	Real-time translation in PSAP intake workflows. Included in Professional+; add-on on Essential. Language packs (Top 10 / Top 15 / custom) deepen coverage. Sell for community language access and equity narratives — and for reducing interpreter wait on common languages.	ECC directors in multilingual communities	On Essential, price translation explicitly. On Pro+, sell language packs for depth.	Not a certified interpreter replacement for every legal scenario	Transcription
Language & Transcription	NexCort Translate (ops / field)	Language access where the public is standing — campus, venue, transit, clinical — not only on the 911 line.	Translation sessions for field and ops consoles outside the classic telecommunicator bridge. Complements PSAP live translation. Sell when the buyer's language pain is at the point of contact (security desk, guest services, triage desk), not only in the ECC.	Campus/venue/transit/hospital ops leaders	Don't double-sell against PSAP Live Translation — explain the different venue of use.	Not the same SKU as PSAP Live Translation; not a phone interpreter network contract	Feature Add-Ons
Language & Transcription	Speaker Diarization	Separates who said what — critical for QA and investigations.	Speaker separation on transcripts by volume tier. Sell to QA, training, and agencies with heavy investigation/records needs. Pairs with enhanced transcription.	QA supervisors, training, records/investigations stakeholders	Play a two-speaker sample. Attach to QA suite deals.	Not perfect identity attribution of unknown callers	Transcription

CALLER MEDIA

Caller Media	Caller SMS Link Generation	Send a secure link so the caller can share location or media without installing an app.	Generates time-limited SMS links for location/media workflows. Foundational for silent/text paths and citizen media. Tier by monthly link volume. Combine with photo/video upload and LiveLocation messaging.	Dispatchers and supervisors; campus/transit passenger workflows	Demo the text-the-link moment. Upsell media tiers once SMS adoption is real.	Not guaranteed carrier delivery SLAs; not a mass-notification short code	Caller Media
Caller Media	Caller Photo / Video Upload	Still images and clips that clarify location or hazard before units arrive.	Caller-originated photo and video upload into the incident, with governance/retention controls. Tier by volume and retention. Strong for 'can't speak safely' and hazard identification. Always mention media audit trail for defensibility.	ECC ops; campus/venue security	Show a photo clarifying an address or weapon description. Attach audit trail for counsel/CJIS comfort.	Not live streaming (that's a separate SKU); not public social media ingest	Caller Media

Caller Media	Live Caller Video Streaming	Narrow live WebRTC view from the caller device with operational discipline.	Real-time caller video into the workspace via consent/SMS flows. Higher-trust, higher-bandwidth than upload. Quote Standard vs Premium carefully; confirm policy for when live video is appropriate. Distinct from NexIQ Vision™ facility cameras.	Supervisors and progressive ECC/campus programs	Separate ‘caller live video’ from ‘facility cameras’ in every proposal line.	Not facility CCTV; not continuous recording of the public without policy	Caller Media
Caller Media	Media Audit Trail / Redaction / Retention	Defensible media handling for investigations, QA, and records requests.	Audit who accessed media, redaction workflows, and retention controls so the platform follows agency hold/purge rules. Sell to counsel, records, and CJIS-minded IT — not as a flashy demo feature.	Agency counsel, records, agency admin/IT	Bring to security review meetings. Bundle with caller media sales.	Not legal privilege advice; not automatic FOIA responses	Caller Media

LOCATION & REPORTING

Location & Reporting	QR & NFC Code Management	Put a report button on every door, stop, and gate — unique URL per location.	Generate unique reporting URLs per location with downloadable QR images and NFC tag URLs. Scan and tap counts tracked separately. Included or add-on by vertical/plan (see Feature Add-Ons matrix). PSAP roles are intentionally excluded from managing campus/venue/transit QR estates — those vertical admins own them. Land-and-expand from Community Connect free tip line into multi-zone paid QR.	Campus, venue, transit admins/supervisors; venue operators	Walk a physical zone story. Upsell analytics and SMS location after adoption.	Not a marketing QR platform; not PSAP-managed for vertical estates	Feature Add-Ons
Location & Reporting	SMS Location Acquisition	Auto-reply a GPS link when someone texts the emergency/reporting number.	When a student, passenger, or tipster texts in, the system can auto-reply with a one-tap location link and track engagement across QR vs NFC vs SMS. Monthly add-on plus setup. Excellent for outdoor campuses and transit stops where address is weak.	Campus safety, transit security, tip-line programs	Demo text → link → pin on map. Attach Location Analytics for leadership reporting.	Not guaranteed precise indoor GPS; not a mass alert short code	Feature Add-Ons
Location & Reporting	Agency Share	Consent-based cross-agency incident awareness — a feature, not a product logo.	Controlled, bidirectional, consent-based sharing of incident context between partner agencies with dual audit trails. Sold as a monthly feature add-on (~\$1,500 list), not a separate product brand. Both agencies must authorize. Scope by incident type. Never imply free cross-tenant browsing.	Neighboring PSAPs, campus↔city pairs, hospital↔PSAP partners	Require both sides in the conversation. Use mutual-aid stories.	Not a free mesh; not automatic data sharing; not CAD-to-CAD by itself	Feature Add-Ons

VERTICAL OPS & COMPLIANCE

Vertical Ops & Compliance	Emergency Alert Broadcast (+ Short Code)	Push occupant alerts from campus/venue/transit consoles — be honest about SMS timing.	Mass notification initiated from vertical consoles. Web dashboard delivery for open sessions is fast; dedicated SMS short-code is a separate pass-through with 8–12 week procurement and carrier delivery measured in minutes for large blasts — not sub-3 seconds. Never oversell SMS speed. Pair with Clery/campus safety narratives carefully and truthfully.	Campus/venue/transit admins and supervisors	Sell dashboard alerting first; treat short-code as a procurement project.	Not IPAWS/WEA replacement; not sub-3s SMS to 50k phones	Feature Add-Ons
Vertical Ops & Compliance	Clery Act Compliance Module	Structured Clery workflows for campus — documentation aid, not legal advice.	Campus Command+ module for CSA registry, human classification, Daily Crime Log timing, public crime log, and ASR statistics support. Explicitly does not constitute legal advice. Distinguishes from the lighter 'basic Clery documentation log' included in Campus base. Sell to Clery coordinators who are drowning in spreadsheets.	Clery coordinators, campus safety leadership	Never claim 'makes you Clery compliant.' Claim 'structures the workflow and evidence trail.'	Not legal advice; not automatic classification without humans	Feature Add-Ons / RC Campus
Vertical Ops & Compliance	Physical Security Ingest	Fire panel and access-control events into ops — lock/unlock stays fail-closed.	Ingests physical security events (fire panel, access control) into ops consoles. Outbound lock/unlock commands are a separate fail-closed flag requiring human approval — do not promise automatic door control. Sell to campus/venue physical security teams integrating SOC and safety reporting.	Physical security / SOC managers with campus or venue estates	Confirm event ingest first; treat actuation as a later controlled phase.	Not automatic unlock; not a full access-control admin suite	Feature Add-Ons
Vertical Ops & Compliance	Hospital Routing Module	Divert status, ED routing, and trauma bay awareness for EMS–hospital coordination.	Hospital Professional+ module for divert status, ED routing, trauma bay availability, and related coordination. Complements RC Hospital base and MCI modules. Sell with EMS medical directors and hospital emergency management — keep PSAP vs hospital portal boundaries clear.	Hospital EMS coordinators, ED leadership	Attach to MCI/mutual-aid regional packages.	Not an EHR; not ambulance billing	Feature Add-Ons / RC Hospital
Vertical Ops & Compliance	Venue Guest Services Console	Guest issues and wayfinding — explicitly not emergency dispatch.	Orange-branded console for VENUE_GUEST_SERVICES and related ops. Handles guest issues separately from security command. Every page should reinforce it is not a 911 emergency dispatch system — your proposal language must say the same. Sell to venue GMs who need guest ops without polluting the security stack.	Venue guest services / guest experience leadership	Always dual-track Security vs Guest Services in the org chart discussion.	Not a 911 system; not a security command replacement	Feature Add-Ons / RC Venue

SUPERVISOR & QA

Supervisor & QA	QA Review Tools / Scorecards / Coaching Notes	Structured coaching instead of random call reviews.	Supervisor suite for scoring calls, documenting coaching, and tracking follow-ups. Limited on Essential; included/expanded on Professional+. Bundle Scorecards + Coaching + Team Dashboards at 15% when sold together (see Supervisor QA sheet). Custom QA rubrics are high-value one-time work after pilot.	Supervisors, training coordinators, agency admins	Ask how many calls they QA today. Sell consistency and documentation.	Not automatic HR discipline; AI QA scoring is a separate upsell	Supervisor QA
Supervisor & QA	Team Performance Dashboards / Call Quality Trends	See team strain and whether coaching is working.	Real-time and longitudinal supervisor analytics for team performance and quality trends. Included on Professional+; add-on on Essential. Pair with iQ Reporting for leadership-facing daily packs.	Supervisors and ECC managers	Show trend lines tied to coaching interventions.	Not payroll/HRIS; not public CompStat	Supervisor QA
RELIABILITY & PLATFORM							
Reliability & Platform	Monitoring / Alert Correlation / On-Call / SLO Dashboards	IT-grade confidence that the platform is healthy during mission-critical ops.	Reliability Ops add-ons for agencies with NOC/SOC or formal on-call. Included heavily in Command; add-on for lower plans. Sell to Agency IT and NC-coordinated enterprise deals — not as dispatcher toys.	Agency IT, NOC/SOC, enterprise architects	Ask about existing paging tools. Offer CloudWatch dashboard package as one-time accelerant.	Not a general ITSM for the whole city	Reliability Ops
Reliability & Platform	Network Access Controls	Only approved networks and time windows can reach the console.	IP allowlists and time-window gates per user group; blocked attempts audited. Professional+ monthly add-on. Strong for CJIS-minded IT reviews and agencies locking down remote access.	Agency IT / information security	Bring to security questionnaires. Pair with audit retention conversations.	Not a full Zero Trust suite for the entire enterprise	Feature Add-Ons
Reliability & Platform	Deception Shield	Honeypot/decoy surfaces that detect probing before real data is exposed.	Defensive security layer using honeypot fields, synthetic paths, and decoy records to detect unauthorized access, credential stuffing, and insider reconnaissance. Command+ monthly. Sell to security-mature enterprises — explain outcomes in plain language, not malware theatrics.	Agency IT / InfoSec, Enterprise buyers	Position as early-warning for abuse — not as entrapment of legitimate users.	Not offensive security services; not a guarantee against all breaches	Feature Add-Ons
Reliability & Platform	Extended Audit Retention / API Keys & Webhooks	Keep audit longer and connect outbound systems — under agency control.	Extended Audit Retention expands beyond plan retention floors for legal hold and grant reporting. API Keys & Webhooks enable scoped outbound integrations and event subscriptions. Both are monthly platform add-ons. Sell into IT and compliance reviews.	Agency admin/IT, integrators	Ask about retention statutes and existing integration backlog.	Not unlimited public APIs; keys are scoped and revocable	Feature Add-Ons

Reliability & Platform	Grant Success Package	One-time package that makes grant reporting and outcome exports easier.	Documentation packages, reporting templates, and outcome exports formatted for PSAP improvement and emergency-management preparedness grants. One-time (~\$2,500 list), Professional+. Excellent closer when budget is grant-shaped.	Grant writers, agency admins, project sponsors	Offer when the funding source is a grant. Don't pretend it writes the grant narrative for them.	Not a grant-writing service; not guaranteed award	Feature Add-Ons
SERVICES & COMMERCIAL							
Services & Commercial	Pilot Programs	Time-boxed proof with clear success criteria — write-back still out of base.	Pre-packaged 90–180 day pilots for Small City, County, Command, and Enterprise profiles (see Pilot Programs sheet). Pilots should prove intake, transcription, supervisor value, and (if scoped) read-only CAD — not full write-back. Always define success metrics and conversion path to annual subscription.	First-time agencies and grant-funded trials	Sell the outcome checklist, not unlimited sandbox time. Protect write-back exclusion in writing.	Not a free forever plan; not full CAD write-back	Pilot Programs
Services & Commercial	Setup / Implementation	One-time work to configure the agency correctly before go-live.	Plan-tiered one-time implementation fees covering environment setup, role configuration, basic integrations assistance, and go-live prep. Vertical sheets have their own implementation bands. Do not under-scope multi-site or multi-CAD work into Essential setup numbers.	All paying agencies	Put setup on every quote. Expand when discovery finds complexity.	Not ongoing support; not onsite travel (bill travel separately)	Essential–Enterprise / vertical sheets
Services & Commercial	Onsite Deployment Services	Experts in the room for discovery, go-live, and floor support.	Day-rate style onsite packages: discovery visit, installation support, pilot launch, production go-live, CAD vendor workshops, dispatcher floor support, executive briefings, AARs. Travel always separate at GSA-aligned policy — never bury travel in a fixed project price without a travel assumption.	Complex rollouts, political go-lives, limited internal IT	Recommend floor support for the first 48 hours of production. Scope travel explicitly.	Not included travel; not unlimited change orders	Onsite Services
Services & Commercial	Training Packages	Protect adoption — train dispatchers, supervisors, and trainers.	Remote and onsite training for admin, dispatcher, and supervisor roles; train-the-trainer and custom materials for Command/Enterprise. Training prevents 'we bought it but nobody uses it.' Train-the-Trainer is high-margin and creates champions.	Training officers, agency admins	Always attach training to Professional+ and vertical launches.	Not a college accredited course; refresher is a separate annual SKU	Training
Services & Commercial	Support Packages (Standard → Mission-Critical / Dedicated)	Match support intensity to operational criticality.	Standard is baseline. Priority is included on Professional — be clear when Mission-Critical is the upsell. Dedicated engineer, CSM, and solution architect are for Command/Enterprise and politically sensitive accounts. Mission-Critical recommended for Command, Enterprise, and agencies in active major-incident posture.	Agency admins; executive sponsors on large deals	Don't oversell Standard on Command deals. Offer CSM when expansion revenue is expected.	Not custom software development hours	Support

Services & Commercial	Storage & Overages / Seat Overages	Overage math when the agency grows past included seats or media limits.	Each plan includes seat bands and media/storage limits. Seat overages (dispatcher vs admin/supervisor) and storage overages are billed monthly when exceeded. Use these to keep base price clean while giving finance a growth path. See Storage Overages and plan sheets.	Agency finance + admins	Model growth seats in Quote Builder. Don't hide overage rates.	Not unlimited usage at base price	Storage Overages / plan sheets
FREE STRATEGIC OFFERINGS							
Free Strategic Offerings	NexCort iQ Community Connect	Permanent free one-zone tip QR for qualifying campus/venue prospects.	Complimentary land-and-expand wedge: one QR code, one physical zone, tips to a designated email. No dispatcher console, analytics, two-way chat, AI, or Clery log. Use to prove reporting adoption, then upsell full tip console, multi-zone QR/NFC, and analytics. Qualifying institutions only — not a general public free tier.	Campus and venue prospects early in the funnel	Always attach a 60–90 day upsell conversation. Track tip volume as the proof.	Not the full Campus/Venue product; not PSAP 911	Sales enablement (no price sheet)
Free Strategic Offerings	Complimentary Operational Intelligence Report	One-time PDF from 30–60 days of anonymized CAD export — discovery accelerator.	Prospect provides anonymized CAD export (call type, timestamp, duration — no PII). NexCort returns a short operational intelligence PDF (volume by hour, mix, language share, peaks). Limited availability — treat as a discovery accelerator for PSAP directors/IT sponsors, not a standing freebie on every deal.	PSAP directors and IT sponsors pre-pilot	Trade the report for a scheduled discovery workshop.	Not a continuous BI subscription; not identified caller analytics	Sales enablement (no price sheet)
Free Strategic Offerings	NexCort iQ Wellness	Anonymous end-of-shift check-in for dispatchers — aggregate only for supervisors.	Permanent free wellness check-in for accredited PSAPs. Supervisors see aggregate trends only — never individual responses, call data, or transcripts. No CJIS exposure. Position as workforce retention / duty-of-care goodwill that builds relationship without requiring a full platform purchase.	PSAP directors and wellness/peer-support champions	Offer alongside Professional conversations as culture signal — not as a discount lever on paid SKUs.	Not clinical mental health care; not individual surveillance of dispatchers	Sales enablement (no price sheet)
INTERNAL — DO NOT SELL							
Internal — Do Not Sell	NexiQ Sales & RFP Intelligence	Internal PSAP/RFP signal tool for NexCort sales teams only.	Internal sales-intelligence workspace for NexCort sales contractors and RC operators (RFP/PSAP signals, enrichment, scoring). Not an agency-facing SKU. Do not present it in customer proposals or imply agencies are buying 'NexiQ intelligence' as a product.	NexCort internal sales only	Never quote to a customer. Keep inside sales portal / RC Admin allowlists.	Not a customer deliverable	Internal only

⚠ **INTERNAL USE ONLY** — Sales language for enablement. Do not paste wholesale into public RFP responses without review. CAD write-back stays rail-locked. NexiQ Vision™ / Call Assist / Vault / mesh are never free. Do not sell NexiQ Sales & RFP Intelligence to agencies. Source alignment: add-on-catalog + sales-feature-catalog +
